1.0 INTRODUCTION

1.1 Purpose and Scope of Work

This report presents the results of a Phase I Environmental Site Assessment (ESA) of the property identified by Assessors Parcel Numbers (APNs) 428-61-1 and 428-61-27 in Hayward, California (subject property or site). A site location map is presented as Plate 1. PES Environmental, Inc. (PES) performed the Phase I ESA on behalf of, and was retained by, Bay + Area Property Developers (BAPD) to compile and evaluate available information to assess for Recognized Environmental Conditions (RECs) associated with the site.

PES understands that BAPD, or an affiliated entity, is considering acquisition of the property and intends to redevelop the site for high density, multi-family residential purposes with commercial businesses on the ground floor. We further understand the Phase I ESA is a component of BAPD's environmental due diligence.

PES performed this Phase I ESA pursuant to our proposal (Reference No. 1440.002.01.P01) dated September 16, 2014, the existing Professional Service Agreement between PES and BAPD (the Agreement), and in general accordance with ASTM International guidelines for Phase I Environmental Site Assessments (ASTM E 1527-13). These practice guidelines comply with the U.S. Environmental Protection Agency's All Appropriate Inquiries (AAI) rule adopted in November 2013. The ESA included the following tasks:

- Federal, State and local agency databases were reviewed to identify nearby sites that have reported the use, storage, or release of hazardous materials;
- Regulatory agency records regarding the site and adjacent properties were reviewed;
- Historical aerial photographs, Sanborn® Fire Insurance maps, and historical topographic maps of the site and surrounding area were evaluated, as available, to assess prior land uses;
- An inspection of the site and a reconnaissance of surrounding properties were performed to assess the potential for contamination of the site from onsite or offsite sources. The site inspection was conducted by an environmental professional with qualifying experience; and
- This report was prepared presenting the results of the Phase I ESA assessment.

A Recognized Environmental Condition, or REC, is defined in the ASTM International guidelines (ASTM E1527-13) as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. A controlled REC (CREC) is a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous

substances or petroleum products allowed to remain in place subject to the implementation of required controls (e.g., property use restrictions, activity/use limitations, institutional controls, or engineering controls). An historical REC (HREC) is a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls.

De minimis conditions are defined by ASTM as conditions that generally do not present a threat to human health or the environment, and that generally would not be the subject of an enforcement action if brought to the attention of appropriate government agencies. A *de minimis* condition is not a REC and not a CREC.

1.2 Special Terms and Conditions

The Phase I ESA was performed in general accordance with ASTM 1527-13 and AAI. There are no other special terms or conditions for this report.

1.3 Limitations and Exceptions

This Phase I ESA was performed in accordance with practices and procedures generally accepted in the consulting environmental engineering profession at the time they were performed. The findings, opinions, conclusions, and recommendations expressed herein are applicable as of the date the services were provided. Our professional judgment to assess the potential for contamination is based on limited data; no warranty is given or implied.

The Phase I ESA was prepared at the request of BAPD and may be relied on only by BAPD and BAPD affiliates involved in the acquisition and/or redevelopment of the subject property. No other party may rely on this report without the express written permission of BAPD and PES.

PES was not provided information regarding the value or purchase price of the subject property, nor prices of comparable properties in the site vicinity. In accordance with ASTM E1527-13, an evaluation of the purchase price relative to those of comparable properties should be conducted by the user of this Phase I ESA, as applicable.

2.0 USER PROVIDED INFORMATION

2.1 Title Records

Title records were not provided to PES for the preparation of this Phase I ESA.

2.2 Environmental Liens or Activity and Use Limitations

Copies of environmental liens, activity limitations, and use limitations were not provided to PES, and PES is not aware of any such liens or activity/use limitations associated with the subject property.

2.3 Specialized Knowledge

PES does not possess any specialized knowledge regarding the subject property. Also, as noted below, BAPD has reported to PES that it has no specialized environmental knowledge regarding the subject property.

2.4 User Questionnaire

As part of the ESA, BAPD's representative, Mr. Blake Peters, completed a User Questionnaire as recommended in ASTM E 1527-13. This questionnaire, completed by the party who will rely on the ESA, facilitates the transfer of known site information to the environmental professional and promotes qualification of the relying party for one of the *Landowner Liability Protections (LLPs)* offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "*Brownfields Amendments*"). A copy of the User Questionnaire is provided in Appendix A.

2.5 Commonly Known or Reasonably Ascertainable Information

Any commonly known or reasonably ascertainable information provided to PES during the preparation of this Phase I ESA is presented within this report.

2.6 Valuation Reduction for Environmental Issues

According to the information provided in User Questionnaire by BAPD (Appendix A), the fair market value of the property has not been adjusted due to contamination known or believed to be present at the subject property.

2.7 Owner, Property Manager, and Occupant Information

A Site Manager Pre-Survey Questionnaire was completed by a representative of the property owners and a copy of the questionnaire is presented in Appendix A. The Pre-Survey Questionnaire responses are discussed in Section 3.7.3.

2.8 Reason for Performing Phase I

PES understands that BAPD requested the Phase I ESA as part of BAPD's due diligence prior to the potential acquisition the property and intended redevelopment into a mixed commercial and residential project.

3.0 SITE DESCRIPTION

3.1 Location and Description

The subject property is comprised of a multi-story medical office building complex with associated landscaping and concrete walkways and asphalt-paved parking and driving lanes located on approximately 3.39 acres. The site includes the street addresses of 22326 and 22330 Main Street, 22455 Maple Court, and 1013 McKeever Avenue in Hayward, California. The subject property consists of two legal parcels identified by Alameda County Assessor's Parcel Numbers (APNs) 428-61-61-1 and 428-61-27 zoned by the City of Hayward as Central City Commercial (CCC).

3.2 Site and Vicinity Characteristics

The subject property is accessed from the southwest via driveways off of Levine Court and Main Street, from the east via a driveway off of Maple Court, and from the north via driveways off of McKeever Avenue. The site is located in an area developed with residential and commercial properties within the City of Hayward and County of Alameda, California. The subject property and adjacent areas are shown on Plate 2.

The site is bounded to the north by McKeever Avenue, commercial, and residential properties, to the east by Maple Court and commercial properties, to the south by commercial buildings and associated parking, and to the west by Main Street and commercial and residential buildings.

3.3 Physical Setting

According to the United States Geological Survey (USGS) *Hayward, California* Quadrangle 7.5-minute series topographic map dated 1980 provided in the report from Environmental Data Resources, Inc. (EDR) of Shelton, Connecticut (Appendix B), the site is situated at an elevation of approximately 127 feet above mean sea level. The subject property is relatively flat and gently slopes to the east (EDR, 2014).

3.4 Regional Geology and Hydrogeology

Geology

Based on descriptions of lithology in reports prepared by others, lithology in the vicinity of the subject property consists primarily of sandy silt and sandy, clayey silts to approximately 24 feet below ground surface (bgs), and is underlain by sands and gravelly, silty sand up to approximately 32 feet bgs (AEI, 2014). The site is relatively flat. The area vicinity gently slopes to the west-southwest (towards San Francisco Bay) (EDR, 2014).

According to a California Geological Survey Map for the Hayward Fault (CGS, 2012), the western portion of the subject property is located within an Alquist-Priolo earthquake fault zone and seismic hazard zone due to the presence of the nearby Hayward Fault.

Hydrogeology

First-encountered groundwater at nearby sites is at approximately 24 feet bgs (AEI, 2014). Groundwater flow direction in the vicinity of the subject property is reportedly variable. Measured groundwater flow directions at nearby sites have ranged from northwest (near the northeastern portion of the subject property) towards San Lorenzo Creek (located approximately 200 feet to the north, to southwest (at locations south of the subject property).

3.5 Wetlands

As shown in the database report from EDR (Appendix B), there are no National Wetlands Inventory (NWI) identified wetlands within 1 mile of the subject property.

3.6 Descriptions of Existing Onsite Structures and Improvements

3.6.1 Structures and Current Use

The subject property consists of a large multi-tenant, multi-story medical office complex building with associated asphalt-paved parking lots. On the eastern side of the subject property, leased tenant spaces within the four-story commercial medical office building (identified as the Hayward Professional Building at 22455 Maple Court) are utilized for medical offices. The building complex to the south (22326 Main Street) is currently vacant. The western portion of the building complex is occupied by commercial and/or medical/dental offices, or vacant office space. The subject property also includes a single family residence at 1013 McKeever Avenue.

The southern portion of the site contains open parking areas. Smaller parking areas are present on the northern and southern sides of 22455 Maple Court building. No indoor parking structures are present on the subject property. Storm water at the subject property is collected in catch basins located throughout the site and is directed towards storm drains.

3.6.2 Utilities

Electricity and natural gas is supplied to the site by Pacific Gas & Electric (PG&E). Potable water and sanitary sewer services are provided by the City of Hayward Department of Public Works (HPW). Potable water is supplied East Bay Municipal Utility District (EBMUD).

3.7 Current Uses of Adjoining Properties

A reconnaissance of the surrounding area was conducted to assess whether neighboring properties pose potential environmental concerns to the subject property. Adjacent land uses are identified on Plate 2. Nearby properties are used for commercial, retail, and residential purposes, as described below.

Properties to the North

The subject property is bounded on the north by McKeever Avenue and residences. Further north is San Lorenzo Creek.

Properties to the East

The subject property is bounded to the east by Maple Court. Further east is a commercial building at 22401-22487 Foothill Boulevard.

Properties to the South

The subject property is bounded to the south by several commercial buildings and associated parking. Further south is A Street.

Properties to the West

The subject property is bounded to the west by Main Street and commercial properties. Further west are residential and commercial properties.

3.8 Past Uses of Property and Adjoining Properties

Historical site use information was obtained through a review of aerial photographs, Sanborn® Fire Insurance Maps, historical topographic maps, city directories, regulatory agency records, and the results of previous environmental investigations (Section 4.0).

3.8.1 Historical Source

- **Aerial Photographs** - Aerial photographs were obtained from Environmental Data Resources, Inc. (EDR) of Milford, Connecticut. Photos for the following years were obtained and reviewed: 1939, 1946, 1958, 1968, 1974, 1982, 1993, 1998, 2005, 2006, 2009, 2010, and 2012. A summary of the aerial photograph review and copies of the photographs are presented in Appendix B;
- **Sanborn® Fire Insurance Maps** - EDR provided Sanborn® Fire Insurance Maps of the subject property for the years 1888, 1893, 1896, 1903, 1907, 1923, 1948, 1950, 1953, 1956, 1957, and 1966. A summary of the Sanborn® Fire Insurance Map review and copies of these maps are included in Appendix C;

- **Topographic Maps** - EDR provided the USGS *Hayward, CA* Quadrangle 15-minute series topographic maps produced in 1899 and 1915, USGS *Hayward, CA* Quadrangle 15-minute series topographic maps produced in 1948 and 1959, and USGS *Hayward, CA* Quadrangle 7.5-minute series topographic maps produced in 1947, 1950, 1968, 1973, 1980 (photo-revised from 1959) and 1993. A summary of the topographic maps review and copies of these maps are included in Appendix D; and
- **City Directories** - A search of city directories was performed by EDR for the years 1920 through 2013 in approximately 5-year intervals. A summary of the city directory review and copies of the directory listings are presented in Appendix E.

3.8.2 Historical Review Summary

Subject Property

The earliest available historical records (1888) indicate the subject property was developed with multiple single-family residential dwellings. Ancillary structures, including sheds, garages, barns were also depicted. The subject property includes a single-family dwelling at 1013 McKeever Avenue; however, by 1953, most of the subject property was redeveloped with the current structures and utilized for various medical practice purposes with ancillary offices and associated parking. Based on the available historical records, multiple addresses have been associated with the subject property.

Site tenants from 1959 to 2013 included small commercial businesses and medical practices, as well as dentist offices, real estate offices, and laboratories. Records indicating previous occupants of the subject site based on PES' historical review are summarized in Appendix E.

Subject Property Vicinity

Based on review of available historical information, the surrounding properties have been used for commercial, retail, and residential purposes. Prior uses in the vicinity of the subject property included hotels, stables, retail spaces, and single-family residences. Automobile repair shops and service stations have historically been located within the subject property vicinity along A Street (to the south of the subject property), and Maple Court (to the east of the subject property). Historical records also indicate the presence of cleaners or dry cleaners adjacent to or in the near vicinity of the subject property.

3.8.3 Interviews with Persons Knowledgeable of the Subject Property

Tomo Fukumoto, representative for the property ownership, provided responses regarding current and historical site use in PES' Pre-Survey Questionnaire (Appendix A). Mr. Fukumoto was interviewed by Mr. Christopher Baldassari of PES on October 21, 2014.

Mr. Fukumoto stated that he had no knowledge of any wells or above-ground or underground storage tanks on the site. Mr. Fukumoto was unaware of any environmental concerns or investigations at the subject site. Mr. Fukumoto stated that the subject property was occupied by medical office practices. He stated that the southern portion of the site, formerly leased to Bryman Medical College, was currently unoccupied.

No other information regarding potential environmental conditions at the site was identified based on interview.

4.0 PREVIOUS ENVIRONMENTAL DOCUMENTS

4.1 Limited Subsurface Investigation – 2014

PES performed a limited subsurface investigation at the subject property in Hayward, California on November 14 and December 16, 2014 (PES, 2015a). The investigation included grab groundwater and soil gas sampling to assess for potential impact to the site from historical and current site operations and potential off-site sources. Borings were advanced and sampled at 18 locations (five grab groundwater, and thirteen soil gas sample locations) during implementation of the investigation.

Groundwater

All constituents detected in the groundwater samples were below RWQCB ELs and California MCLs.

The pattern of detections in the groundwater data suggested the presence of a relatively low-level, area-wide impact to the groundwater by petroleum hydrocarbons and chlorinated VOCs that may be attributed to the long term commercial/industrial use of many properties in subject property vicinity, as indicated in hydraulically upgradient groundwater samples (i.e., GW2, GW3, GW4, and GW5) with detections including chlorinated VOCs PCE and trichloroethylene (TCE), and the aromatic VOCs, benzene, toluene and methyl-tert-butyl-ether (MTBE) (petroleum hydrocarbon-associated compounds), that appear to be coming from off-site location(s). Based on the low concentrations of the detected VOCs, there did not appear to be significant vapor intrusion concerns for the current use (commercial) of the site resultant from impacts to groundwater beneath the site, and detected groundwater concentrations were also below residential use ELs.

Soil Gas

While VOCs were detected at concentrations that were identified as not representing an unacceptable risk to current commercial site users due to exposure to soil vapor at the majority of the site, relatively elevated concentrations of PCE were detected in five of the six soil gas samples collected in the northeastern quadrant of the site (i.e., north, east and south of the

four-story medical building), represented by soil gas samples SV1, SV2, SV3, SV4, SV11, and SV12. Co-located shallow (5-foot bgs) and deeper (10-foot bgs) samples were also collected at three of the soil gas sample locations (SV1, SV2, and SV12) in the northeast quadrant. Concentrations of PCE were higher in each of the deeper samples.

Based on the proximity of the detections to the known release at 22401-22487 Foothill Boulevard, located across Maple Court and in northeastern proximity to the site, the concentrations of PCE detected in soil gas samples were attributed to the identified release of PCE to the subsurface at that site.

Based on the detected concentrations of VOCs in this area of the site, PES recommended that under the existing commercial use scenario no additional investigation or recommendations for remediation activities at the subject property appeared warranted. However, because PCE was detected above the conservative residential ESL in soil gas samples collected in the northeastern quadrant of the site, PES noted that should redevelopment for future residential uses in this area of the site be planned, industry standard vapor mitigation measures (such as a vapor barrier with a passive ventilation system) may be employed as part of redevelopment to address potential indoor air concerns for future residential users in the northeast portion of the site.

5.0 ENVIRONMENTAL AGENCY DATABASES AND RECORDS REVIEW

5.1 Environmental Liens

Based on review of an environmental database provided by EDR, there are no listed Federal Superfund (NPL) liens or State deed restrictions associated with the subject property.

5.2 Standard Environmental Record Sources

The discussion presented in this section is based on available information provided by environmental agencies and databases. An EDR database report dated September 23, 2014, contains listings of sites that are located within a 1-mile radius which were selected in accordance with the ASTM E1527-13 standard. This information is obtained from computerized databases of Federal, State, and local environmental records. The database report, which includes descriptions of the listings, is provided in Appendix F on CD-ROM.

In addition, various non-ASTM, supplemental local, State, and Federal regulatory databases were searched (e.g., AST, Coal Gasification Plants, and Waste Discharge System databases) and summarized in the EDR report. A summary of pertinent findings of PES' review of the EDR report are presented below.

The following California Environmental Protection Agency (CalEPA) websites were also searched for environmental records related to the subject property:

- SWRCB's GeoTracker website located at <http://geotracker.swrcb.ca.gov/>; and
- DTSC's EnviroStor website located at <http://www.envirostor.dtsc.ca.gov/public/default.asp>.

5.2.1 Subject Property Records

The subject property was listed in the U.S. EPA Facility Index System (FINDS), U.S. EPA Integrated Compliance Information System (ICIS), US Aerometric Information Retrieval System (AIRS), and California Hazardous Waste Information System (HAZNET) databases. The listings were for photochemical waste and asbestos-containing waste removal listed under various medical practice occupants.

The subject property was not listed on GeoTracker or EnviroStor's websites, and no files for the subject property are maintained by the SWRCB or DTSC.

PES requested records from the Hayward Building Department (HBD) and Hayward Fire Department (the local Certified Unified Program Agency [CUPA]) on October 27, 2014. The HBD had building plans, building inspection records and notices, and documents related to permit applications; no significant environmental records were reviewed. No pertinent environmental records from the CUPA were identified based on PES' review.

5.2.2 Surrounding Area

Several sites in the subject site vicinity are listed on hazardous materials release and storage databases. Sites of potential environmental concern closest to the subject property are discussed below.

- **Selix Formal Wear, 22401-22487 Foothill Boulevard**, is located approximately 125 feet northeast of the subject property. The site is listed on the Spills, Leaks, Investigations, and Cleanups (SLIC) database in the EDR report. According to an April 29, 2014 *Subsurface Investigation* report prepared by AEI Consultants, the site conducted dry cleaning operations from the early 2000s to the present. In 2000 and 2001, soil and groundwater investigation activities were conducted for an assessment of tetrachloroethylene (PCE) releases to soil and groundwater. During the initial investigation period three groundwater monitoring wells were installed and sampled and eight grab groundwater samples were collected. The groundwater sample results indicated the presence of low concentrations of PCE at the Selix site, and low levels of PCE were also detected at upgradient locations (both on and off the Selix property). Based on the relatively low concentrations of chlorinated solvents detected in onsite groundwater the site was granted case closure by the San Francisco Bay Regional Water Quality Control Board (RWQCB) in 2001 (AEI, 2014);

- In 2013, a limited sub-slab vapor investigation was conducted to assess for potential vapor intrusion concerns. Six sub-slab vapor samples were collected. The results indicated elevated PCE and trichloroethylene (TCE) vapor concentrations exceeding Environmental Screening Level (ESL) indoor air screening levels. The SLIC case was subsequently reopened and is currently overseen by the RWQCB (GeoTracker, 2014). In 2013 and 2014, additional investigation consisting of soil gas, soil, and groundwater sampling was conducted by AEI Consultants (AEI, 2014). Volatile organic compounds (VOCs) were not detected in soil samples. PCE and TCE were detected in groundwater samples below their respective commercial land use ESLs. PCE and TCE were detected above their respective ESLs for commercial land use in sub-slab soil gas samples. AEI concluded that: (1) the horizontal extent of groundwater contamination was delineated and did not extend offsite; and (2) mitigation of sub-slab soil vapor was warranted based on vapor intrusion concerns. Based on the additional investigation results, the RWQCB concurred and requested preparation of a Remedial Action Work Plan (RAW) to address the elevated PCE and TCE vapors present beneath the building. The RWQCB also concurred that groundwater was not impacted significantly and no further groundwater investigation was required. The RAW was submitted to the RWQCB in December 2014. The RAW proposes installing soil vapor extraction (SVE) wells in two trenches for the purpose of removing PCE mass from the subsurface in the vicinity of the former DCU, conducting a three-day SVE pilot study, and collecting additional soil and soil gas samples from various locations beneath the building;
- Based on the limited investigation conducted at the subject site, and the proximity of the detections to the known release at 22401-22487 Foothill Boulevard, the concentrations of PCE detected in soil gas samples collected at the subject site (discussed in Section 4.1) may be attributable to the identified release of PCE to the subsurface at that site;
- **CVS Pharmacy No. 0816/Longs Store No. 472, 22501 Foothill Boulevard**, is approximately 430 feet east of the subject property (upgradient). According to the SWRCB GeoTracker website, a LUST case (for petroleum hydrocarbons) was closed in 2001 (GeoTracker, 2014). Though the site is hydraulically upgradient, this site is listed as a soils-only case and is unlikely to present a significant environmental concern for the subject property;
- **Union Oil Service Station No. 6049/Chevron Facility No. 351746, 898 A Street**, is approximately 560 feet south-southwest of the subject property (crossgradient to downgradient). According to the GeoTracker's website, the LUST case (concerning heavy end petroleum hydrocarbons) is still open in the verification monitoring phase (GeoTracker, 2014). The site is in an inferred crossgradient to downgradient location from the subject property; as such, this site is not anticipated to present a significant environmental concern for the subject property;

- **Ravano Auto, 1000-1010 A Street**, a former auto and gasoline service station, is directly adjacent to the southern subject property boundary (in an inferred upgradient direction), and was reported in the EDR report to have operated between the 1920s into the 1960s. The site has since undergone redevelopment and is currently occupied by a Wienerschnitzel restaurant. Based on the results of subsurface investigation (consisting of grab groundwater sample GW5 and soil gas sample SV7, collected on the subject property), there does not appear to be any significant impact to the subject property from potential release from historical USTs at this site;
- **Vamco Dry Cleanomat, 22475 Maple Court**, is reported in the EDR report as a former dry cleaning facility, and is directly adjacent to the eastern portion the subject property (in the inferred upgradient direction). The facility reportedly operated between the 1920s and 1960s. The site is currently used for commercial purposes. No documents indicating subsurface environmental conditions at the site identified by PES.
- Based on the limited investigation conducted at the subject site, PCE detected in soil gas samples collected at the subject site (discussed in Section 4.1) may be attributable to a release of PCE to the subsurface at that site; and
- **Automat Coin Laundrette, 1034 A Street**, is reported in the EDR report as a former cleaning facility, and is directly adjacent to the subject property (in the inferred upgradient direction). The facility reportedly operated between the 1950s and 1960s. The site is currently used for commercial purposes. No documents indicating subsurface environmental conditions or past chemical use history at the site were identified by PES. Based on the results of subsurface investigation (PES, 2015a) (discussed in Section 4.1), there does not appear to be any significant impact to the subject property from potential release from historical uses at this site

The other sites listed in the surrounding area in the databases are not expected to present significant environmental concerns to the subject property based on one or more of the following: (1) the listed property has received case closure by the appropriate regulatory agency; (2) the listed property is either crossgradient or downgradient of the subject property with respect to the inferred regional groundwater flow direction; (3) the listed property is a soils-only affected case; and (4) the listed property is located at too great a distance to represent a significant environmental concern with respect to the subject property.

6.0 SITE INSPECTION

Inspection of the subject property was conducted by Mr. Christopher Baldassari of PES on October 21, 2014. PES was accompanied by Mr. Tomo Fukumoto of N&A Marketing, Inc. Accessible areas of the site and representative medical and office spaces were inspected. Site photographs are provided on Plates 3 through 25.

Exterior Observations

The exterior of the subject property consists of asphalt paved parking and driving areas (Plate 2; Plate 4, Photo 1; and Plate 8, Photo 1). No hazardous material use or storage was observed in exterior areas at the subject property, and no work activities were observed in any exterior areas. An exterior natural gas-powered water boiler was observed behind the residence at 1013 McKeever Avenue (located on the subject property) (Plate 25, Photo 1); no concerns were noted.

No evidence of groundwater monitoring wells was observed. Surface water drainage in the driving and parking areas of the site is controlled by drop inlets routed to storm drains. A wastewater outfall was observed in the central equipment courtyard (Plate 19, Photo 1).

The building roofs were inspected. Numerous HVAC units, cellular antennas, and a single roof-mounted refrigerant unit were observed. No obvious issues of environmental concern were identified on the building roofs.

De minimis surface staining (e.g., from vehicle oil leaks) was observed on the parking lot surface; however, no indications of significant spills, leaks or environmental concerns were observed.

Interior Observations

PES inspected the interior of the subject property accompanied by Mr. Fukumoto. Selective areas of the building interiors between the first four floors of the building complex were observed during the site inspection. Most medical office and examination area observations were limited to common areas and major corridors (Plate 11, Photo 2; and Plate 23, Photo 2). In general, interior office and medical areas were in good condition. Minor water intrusion (e.g., salt efflorescence in hallway flooring in subgrade basement areas) was observed in limited areas of the site (Plate 24, Photo 1). Current and former uses of the basement areas include break rooms, maintenance rooms, a morgue, electrical rooms, hot water storage, records storage, sterilize/non-sterile storage, and laundry facilities.

PES inspected a maintenance workshop in the basement area of the 22455 Maple Court structure (Plate 13, Photo 2). Small quantities of petroleum-based solvents, glues, thinners, and refrigerant coil cleaning chemicals were observed stored in wooden shelves. A 1-gallon can of Staticol (a detergent utilized in PCE-based dry cleaning operations) was observed (Plate 13, Photo 1). No dry cleaning solvents (e.g., PCE) or dry cleaning units were observed.

A 55-gallon drum was observed in the basement area; the drum contents were not identified and the drum was not stored in secondary containment (Plate 16, Photo 1).

Used fluorescent lights were observed in a storage closet in the basement (Plate 21, Photo 1). Several shallow sumps were observed in basement areas (Plate 16, Photo 2). No concerns were noted.

6.1 Chemical Use and Storage

Observed chemical use and storage is described in Section 6.0, above.

6.2 Underground and Aboveground Storage Tanks

No evidence of USTs or ASTs was observed at the site or in records obtained during file reviews.

6.3 Back-Up Generators

An internal combustion engine (ICE) generator was observed in an equipment courtyard located in the center of the subject property buildings (Plate 4, Photo 2; and Plate 19, Photo 2). A fuel source was not identified during the inspection, and Mr. Fukumoto was unaware of the historic or current fuel source. No records concerning the ICE generator were obtained by PES from local oversight agencies. The generator did not appear to be operable and no fuel source was identified.

6.4 Elevators

Three elevator machine rooms in the basement were inspected. A drum of hydraulic oil was observed in one elevator room (Plate 14, Photo 1). Evidence of leakage or spills of hydraulic fluid within the elevator machine room was observed in each location (Plate 12, Photo 1; Plate 14, Photo 2; and Plate 23, Photo 1).

6.5 Hydraulic Equipment

One hydraulic compactor was also observed on the northern side of 22455 Maple Court; no concerns were noted.

6.6 Indications of Polychlorinated Biphenyls (PCBs)

One pad-mounted wet transformer was observed behind the residence at 1013 McKeever Avenue, the transformer appeared to be in good condition and no leaks or staining/discoloration were observed. Three wet transformers were observed in a compound located on the northern side of the 22455 Maple Court four-story building; the transformers appeared to be in good condition and no leaks or staining/discoloration were observed (Plate 24, Photo 1). No labels indicating the PCB content of the transformers were observed.

6.7 Other Conditions

6.7.1 Asbestos

An assessment of asbestos-containing materials was not conducted as part of this Phase I ESA and is not part of the ASTM scope. Standards set by the Occupational Safety and Health Administration (OSHA) require building owners to presume that thermal system insulation (TSI) and surfacing ACM found in buildings constructed before 1981, and floor tile installed in buildings through 1981, are asbestos containing, unless demonstrated to be less than 1 percent asbestos through sampling. The rule does not permit an assumption to be made that a material does not contain asbestos in buildings constructed after 1980. However, since the late 1970s to early 1980s, asbestos has been removed or substituted for in all but a small number of construction products. For example, asbestos is still used, although at low concentrations, in various mastics and roofing materials.

Based on the construction date of the subject property building (prior to 1981) asbestos may be present within the onsite building materials. A comprehensive asbestos survey is recommended prior to significant renovation or demolition activities so that these materials, if present, can be properly managed.

6.7.2 Radon

The California Radon Database includes radon information from testing conducted at facilities within the subject property zip code (94541). The database includes test results from three sites within the subject property zip code. All of the test results were below the U.S. EPA's recommended action level of 4 picocuries per liter (pCi/l). The Federal Radon Database includes radon information from testing conducted at facilities within Alameda County, California. The database includes test results from 16 sites, including basements, first floor and second floor locations. All of the test results were below the U.S. EPA's recommended action level.

The survey indicates that there is a low for radon intrusion at the subject property area to be above the EPA action level.

6.7.3 Solid Waste

A biohazard storage compound was observed on the northern side of the 22455 Maple Court building. Two solid waste dumpsters were located in the southeastern portion of the site. No concerns were identified with solid waste storage at the subject property.

6.7.4 Lead in Paint

A lead based paint survey was not conducted as part of this Phase I ESA. The Consumer Products Safety Commission limited lead content in residential paint to 0.06 percent (600 parts per million) in 1978. The use of paint containing greater than 0.06 percent lead was also prohibited in areas where consumers have direct access to painted surfaces. Because the construction date of the subject property buildings was prior to 1978, a lead-based paint (LBP) survey is recommended prior to significant renovation or demolition activities so LBP, if present, can be properly managed.

6.7.5 Vapor Intrusion

The observation of chemicals associated with dry cleaning, and the associated potential for onsite dry cleaning having been conducted as part of the hospital's historical laundry operations, represents a potential vapor intrusion condition.

Using the results of environmental database and document review, PES also evaluated nearby properties for the potential for intrusion beneath the subject property by subsurface organic compounds (i.e., from soil vapor and/or groundwater contaminated with volatile organic chemicals). Four additional off-site locations at adjacent or nearby properties where vapor encroachment could be a concern were identified as potential vapor encroachment concerns (pVECs) for the subject property:

- **Selix Formal Wear, 22401-22487 Foothill Boulevard:** As discussed in Section 5.2.2, elevated concentrations of chlorinated VOCs, including PCE and TCE, have been detected in soil vapor as the results of releases to the subsurface at the nearby Selix Formal Wear site at 22401-22487 Foothill Boulevard, with concentrations above the soil vapor environmental screening level (ESL¹) established by the RWQCB in a commercial/industrial land use setting. While the Selix Formal Wear site does not appear to present a significant concern to groundwater beneath the subject site based on prior investigation results, and is hydraulically downgradient or crossgradient of the subject site, a RAW has been requested to address the elevated sub-slab vapor concentrations. Furthermore, the horizontal extent of elevated concentrations of PCE and TCE in soil vapor have not been delineated. Based on elevated PCE-affected soil gas concentrations detected at on- and off-site (i.e., detected at the subject property during the 2014 limited subsurface characterization), the documented release of dry cleaning solvents from the 22401-22487 Foothill Boulevard has likely encroached onto the subject property, and the elevated concentrations of PCE detected in soil gas represent a vapor intrusion concern (VIC);

¹ California Regional Water Quality Control Board Based - San Francisco Region (SFRWQCB), 2013. December 2013 Update to Environmental Screening Levels, Table E-1. December 23.

- **22475 Maple Court (Former Vamco Dry Cleanomat):** A former dry cleaning operation was reportedly located at this adjacent upgradient property. No documents indicating subsurface environmental conditions at the site were identified by PES. The results of the limited investigation conducted at the subject site indicated the presence of elevated PCE concentrations in soil gas samples collected at the subject site in the near vicinity of the 22475 Maple Court property (discussed in Section 4.1). As such, the elevated concentrations of PCE detected in soil gas, and likely attributable to the 22475 Maple Court property, indicate that PCE-affected soil gas has encroached onto the subject property at concentrations above regulatory screening levels for residential use, and as such, constitute a vapor intrusion concern (VIC);
- **1034 A Street (Former Automat Coin Laundrette):** A former cleaning operation was located at this adjacent upgradient property. No documents indicating subsurface environmental conditions at the site were identified by PES. Based on soil vapor and groundwater sample results of the limited subsurface investigation conducted at the subject property (PES, 2015a), this site is not considered a significant environmental concern to the subject property; and
- **1000/1010 A Street (Former Ravano Auto Service):** An auto service gasoline station was located at this adjacent upgradient property. No documents indicating subsurface environmental conditions at the site were identified by PES. Based on soil vapor and groundwater sample results of the limited subsurface investigation conducted at the subject property (PES, 2015a), this site is not considered a significant environmental concern to the subject property.

7.0 SUMMARY AND CONCLUSIONS

7.1 Summary

The subject property is located within the City of Hayward and County of Alameda, California, and consists of two legal parcels identified by Alameda County Assessor's Parcel Numbers (APNs) 428-61-61-1 and 428-61-27 comprising approximately 3.39 acres. The subject property was initially developed with single-family properties as early as 1888. In or around 1953 the majority of the site was redeveloped for commercial use as Levine Hospital and medical offices. The subject property is located in a mixed residential and commercial area and is comprised of a multi-story medical office building complex, built in several phases between the 1950s and 1970s with associated landscaping and concrete walkways and asphalt-paved parking and driving lanes, and a single family residence. Since construction of the commercial medical and office facilities site uses have included commercial and medical offices and laboratories.

The site is bounded to the north by McKeever Avenue and residential properties, to the east by Maple Court and commercial properties, to the south by commercial properties, and to the west by Main Street and, across Main Street, commercial and residential buildings. Surface water drainage in the driving and parking areas of the site is controlled by drop inlets routed to storm drains.

The subject property is relatively flat and gently slopes to the east (EDR, 2014). The site is located on or adjacent to a portion of the Hayward Fault.

Site Observations

During the site inspection several electrical transformers were observed at the northern portion of the subject property. An ICE generator was observed in the interior equipment courtyard; however, the ICE generator's fuel source was not identified.

Dry cleaning detergent was observed in a basement maintenance room; however, no chlorinated solvents or dry cleaning units were observed. A 55-gallon drum was observed in the basement area; the drum contents were not identified and the drum was not stored in secondary containment (Plate 16, Photo 1). Used fluorescent lights were observed in a storage closet in the basement (Plate 21, Photo 1). Three elevator machine rooms in the basement were inspected; evidence of leakage or spills of hydraulic fluid within the elevator machine rooms was observed. A biohazard waste storage area was observed in the northern portion of the site.

Regulatory Agency Records

The subject property was listed in the FINDS, ICIS, HAZNET, and US AIRS databases reported by EDR for the address of 22455 Maple Court. The subject property was not listed on GeoTracker or EnviroStor's websites. No files for the subject property are maintained by the RWQCB or DTSC. No records for the site are on file at HBD or at the HFD.

In general, the listed on-site facilities are not expected to pose significant environmental concerns with respect to the subject property, based on one or more of the reasons described below.

- No regulatory violation or other evidence suggesting possible environmental impact related to the generation or storage of hazardous materials, or disposal of waste was identified at any of these listings. Consequently, available regulatory records for these facilities do not indicate evidence of potential significant environmental concerns with respect to the subject property; and
- The listed facility has received regulatory closure by the appropriate regulatory agency.

Regulatory Agency Records for Offsite Facilities

Various sites within ½-mile from the subject property were identified on the databases listed in the EDR report. However, most of the sites listed are not expected to present significant environmental concerns to the subject property based on one or more of the following:

(1) the listed property has received case closure by the appropriate regulatory agency; (2) the listed property is either crossgradient or downgradient of the subject property with respect to the inferred regional groundwater flow direction; (3) the listed property is a soils-only affected case; and (4) the listed property is located at too great a distance to represent a significant environmental concern with respect to the subject property.

The sites of interest closest to the subject property include:

- **22401-22487 Foothill Boulevard (Selix Formal Wear)**, is located approximately 125 feet northeast of the subject property. The site is currently overseen by RWQCB (GeoTracker, 2014). In 2013-2014, investigation indicated that PCE and TCE were detected in soil gas beneath the building at concentrations exceeding ESLs for commercial land use. Based on the reported investigation results, the RWQCB requested preparation of a RAW to address the elevated soil gas concentrations that present a potential health risk beneath the building; the RWQCB also concurred that groundwater was not impacted significantly and no further groundwater investigation was required. Lateral definition of VOC-affected soil gas has not been conducted;
- **22475 Maple Court (Former Vamco Dry Cleanomat)**: A former dry cleaning operation reportedly operated at this adjacent upgradient property during the 1920s through 1960s;
- **1034 A Street (Former Automat Coin Laundrette)**: A former cleaning operation reportedly operated at this adjacent upgradient property between the 1950s and 1960s. On-site investigation of potential impacts from any unauthorized discharges from the cleaner does not appear to have been conducted; and
- **1000/1010 A Street (Former Ravano Auto Service Station)**: An auto service gasoline station was reportedly located at this adjacent upgradient property between the 1920s and 1960s. No documents indicating subsurface environmental conditions at the site were identified by PES.

7.2 Conclusions

PES has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ATSM Practice E 1527-13 of the properties identified by APNs 428-61-1 and 429-61-27 in Hayward, California, the *subject property*. Any exceptions to, or deletions from, this practice are described in Section 1.3 of this report. This assessment revealed no recognized environmental concerns (RECs) in connection with the property, with the following exceptions:

- The observation of hydraulic oil releases from the elevator mechanical rooms in the basement level of the subject property buildings constitutes a REC;
- **22401-22487 Foothill Boulevard (Selix Formal Wear):** Based on elevated PCE-affected soil gas concentrations detected at on- and off-site (i.e., detected at the subject property during the 2014 limited subsurface characterization), the documented release of dry cleaning solvents has encroached onto the subject property. The elevated concentrations of PCE detected in soil gas represent a vapor intrusion concern (VIC), and constitutes a REC;
- **22475 Maple Court (Former Vamco Dry Cleanomat):** Dry cleaning was reportedly conducted at this adjacent upgradient property during the 1920s through 1960s. Based on the limited investigation conducted at the subject site, PCE was detected in soil gas samples collected adjacent to the 22475 Maple Court site (discussed in Section 4.1) and indicate that PCE-affected soil gas has encroached onto the subject property at concentrations above residential screening levels. The elevated concentrations of PCE detected in soil gas represent a vapor intrusion concern (VIC), and constitutes a REC;

While not considered a REC by ASTM standards, the following noteworthy observations were identified during the Phase I ESA research:

- Based on the limited subsurface investigation conducted in 2014 (PES, 2015a), dry cleaning chemicals observed onsite during the site inspection do not appear to have adversely affected the subsurface of the subject property;
- A former cleaning operation reportedly operated at 1034 A Street (Former Automat Coin Laundrette) between the 1950s and 1960s. The site is adjacent to the subject property and in an inferred upgradient location. On-site investigation of potential impacts from any unauthorized discharges of dry cleaning-related solvents does not appear to have been assessed; however, based on soil vapor and groundwater sample results of the limited subsurface investigation conducted at the subject property (PES, 2015a), this site is not considered a significant environmental concern to the subject property;

- An auto service gasoline station was reportedly located at 1000/1010 A Street (Former Ravano Auto Service Station) between the 1920s and 1960s. The property is likely upgradient, and is adjacent to the subject property. No documents indicating subsurface environmental conditions at the site were identified by PES. Based on soil vapor and groundwater sample results of the limited subsurface investigation conducted at the subject property (PES, 2015a), this site is not considered a significant environmental concern to the subject property.
- The fuel source of the ICE generator was not identified during preparation of this report. While the generator fuel source may have been from supplied natural gas, propane or an aboveground storage tank (AST), the potential exists for the an unidentified UST to be present on the subject property associated with fuel storage for the ICE generator;
- Universal waste observed in a storage closet in the basement level of the subject property building should be properly managed and disposed or recycled at an appropriate hazardous waste facility;
- Secondary containment was not present for the 55-gallon drum of hydraulic oil, and the unlabeled 55-gallon drum located in the basement level of the building were stored on the concrete floor. Secondary containment or appropriate offsite disposal for these materials is recommended;
- Based on the age of the building, there is a potential for the presence of asbestos- and/or lead-containing building materials. Prior to any significant renovation of the existing structure, ACM and LBP surveys should be conducted so that these materials, if present, can be properly managed; and
- Based on the potential for the three wet transformers located at the northern portion of the subject property to contain PCBs, assessment should be conducted after these transformers are removed or de-energized.

8.0 DATA GAPS STATEMENT

PES did not inspect all tenant spaces within the subject property; however, based on PES' understanding that none of the tenants generate, store, or dispose of hazardous materials, the lack of inspection of all tenant spaces is not considered a significant data gap.

No significant data gaps that may have affected our ability to identify RECs associated with the subject property were identified during the performance of this Phase I ESA.

9.0 ADDITIONAL SERVICES

A limited subsurface investigation was performed (PES, 2015a) during the preparation of this Phase I ESA.

10.0 ENVIRONMENTAL PROFESSIONAL STATEMENT

We declare that to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312.

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquires in conformance with the standards and practices set forth in 40 CFR Part 312. Resumes of the Environmental Professionals signing this report are presented in Appendix H.

USER QUESTIONNAIRE AND OWNER PRE-SURVEY QUESTIONNAIRE

USER QUESTIONNAIRE¹

PHASE I ENVIRONMENTAL SITE ASSESSMENT

In order to qualify for one of the *Landowner Liability Protections (LLPs)*² offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "*Brownfields Amendments*"), the User must provide the following information (if available) to the environmental professional. Failure to provide this information could result in a determination that "all appropriate inquiry" is not complete.

User Information	
Name:	ISLAND PETROLEUM, VP
Title:	
Company:	BAYVIEW PROPERTY DEVELOPERS, LLC
Representing, if applicable:	
Signature:	 Date: 10.20.14

Site Information	
Site Name:	LEVINE HOSPITAL
Address:	22330 MAIN ST, HAYWARD CA 94541

1. Environmental liens that are filed or recorded against the property (40 CFR 312.25)
<i>Did a search of recorded land title records (or judicial records where appropriate³) identify any environmental cleanup liens filed or recorded against the property under federal, tribal, state or local law?</i>
DO NOT KNOW.

2. Activity and land use limitations that are in place on the property or that have been filed or recorded against the property (40 CFR 312.26(a)(1)(v) and (vi))
<i>Did a search of recorded land title records (or judicial records, where appropriate³) identify any activity or use limitations (AULs), such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state or local law?</i>
± 13 PARKING SPACES ARE DEDICATED AS AN EASEMENT FOR THE ADJACENT PARCEL ON A STREET.

¹ In accordance with Appendix X3 of ASTM E1527-13.

² *Landowner Liability Protections*, or *LLPs*, is the term used to describe the three types of potential defenses to Superfund liability in EPA's *Interim Guidance Regarding Criteria Landowners Must Meet in Order to Qualify for Bona Fide Prospective Purchaser, Contiguous Property Owner, or Innocent Landowner Limitations on CERCLA Liability* ("Common Elements" Guide) issued on March 6, 2003.

³ In certain jurisdictions, federal, tribal, state, or local statutes, or regulations specify that environmental lien and Activity and Use Limitations (AULs) be filed in judicial records rather than in land title records. In such cases judicial records must be searched for environmental liens and AULs.

3. Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28)

As the user of this Phase I ESA, do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former property occupants of the property or an adjoining property so that you have specialized knowledge of the chemicals and processes used by this type of business?

NO PREVIOUS CONTACT WITH THE SUBJECT PROPERTY.

4. Relationship of the purchase price to the fair market value of the property if it were not contaminated (40 CFR 312.29)

Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?

YES IT DOES. THERE WAS NO DISCOUNT FOR POTENTIAL CONTAMINATION.

5. Commonly known or reasonably ascertainable information about the property (40 CFR 312.30)

Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, as User:

(a) Do you know the past uses of the property?

HOSPITAL, COLLEGE, MEDICAL OFFICE

(b) Do you know of specific chemicals that are present or once present at the property?

NO

(c) Do you know of spills or other chemical releases that have taken place at the property?

NO

(d) Do you know of any environmental cleanups that have taken place at the property?

NO

6. The degree of obviousness of the presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31)

As the user of this ESA, based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of releases at the property?

NO, BUT THE COMMON BASEMENT AND OLD MECHANICAL EQUIPMENT ARE CONCERNS.

KEY SITE MANAGER – PRE-SURVEY QUESTIONNAIRE

Name of person completing questionnaire: Tomo Fukumoto
 Association with property: Property manager
 Length of association with property: 14 years
 Date: 10/31/14
 Phone Number: 650-348-6140
 Property Name: Hayward Medical Center
 PES Project Number: _____

Directions: Please answer all questions to the best of your knowledge and in good faith. Mark the column corresponding to the appropriate response. Additional details necessary to explain any yes or unknown responses should be provided in the “Comments” column.

Note: U/NR indicates “Unknown” or “No Response”.

QUESTION		RESPONSE			COMMENTS
		Y	N	U/NR	
1A.	Is the Project used for an industrial use?		✓		
1B.	Are any adjoining properties used for an industrial use?		✓		
2A.	To the best of your knowledge, has the Project been used for an industrial use in the past?		✓		
2B.	To the best of your knowledge, has any adjoining properties been used for an industrial use in the past?		✓		
3A.	Is the Project used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junkyard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility?		✓		
3B.	Is any adjoining property used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junkyard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility?		✓		
4A.	To the best of your knowledge, has the Project been used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junkyard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility?		✓		
4B.	To the best of your knowledge, has any adjoining property been used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junkyard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility?		✓		
5A.	Are there currently any automotive or industrial batteries, pesticides, paints, or other chemicals in individual containers of greater than five gallons in volume or fifty gallons in the aggregate, stored on or used at the Project?		✓		

QUESTION		RESPONSE			COMMENTS
		Y	N	U/NR	
5B.	To the best of your knowledge, have there been previously any automotive or industrial batteries, pesticides, paints, or other chemicals in individual containers of greater than five gallons in volume or fifty gallons in the aggregate, stored on or used at the Project?		✓		
6A.	Are there currently any industrial drums (typically 55 gallon) or sacks of chemicals located on the Project?		✓		
6B.	To the best of your knowledge, have there been previously any industrial drums (typically 55 gallon) or sacks of chemicals located on the Project?		✓		
7A.	Are there currently any groundwater monitoring wells or other groundwater wells (i.e., potable drinking water wells) located on the Project?		✓		
7B.	To the best of your knowledge, have there been previously any groundwater monitoring wells or other groundwater wells (i.e., potable drinking water wells) located on the Project?		✓		
8A.	Has fill dirt been brought onto the Project which originated from a contaminated site?			✓	
8B.	Has fill dirt been brought onto the Project which is of an unknown origin?			✓	
9A.	Are there currently any pits, ponds or lagoons located on the Project in connection with waste treatment or waste disposal?		✓		
9B.	To the best of your knowledge, have there been previously any pits, ponds or lagoons located on the Project in connection with waste treatment or waste disposal?		✓		
10A.	Is there currently, any stained soil on the Project?		✓		
10B.	To the best of your knowledge, has there been previously any stained soil on the Project?		✓		
11A.	Are there currently any registered or unregistered storage tanks (above or underground) located on the Project?		✓		
11B.	To the best of your knowledge, have there been previously any registered or unregistered storage tanks (above or underground) located on the Project?		✓		
12A.	Are there currently any vent pipes, fill pipes or access ways indicating a fill pipe protruding from the ground on the Project or adjacent to any structure located on the Project?		✓		
12B.	To the best of your knowledge, have there been previously any vent pipes, fill pipes or access ways indicating a fill pipe protruding from the ground on the Project or adjacent to any structure located on the Project?		✓		
13A.	Are there currently any flooring, drains, or walls located at the Project that are stained by substances other than water or are emitting foul odors?		✓		
13B.	To the best of your knowledge, have there been previously any flooring, drains, or walls located at the Project that are stained by substances other than water or are emitting foul odors?		✓		

QUESTION		RESPONSE			COMMENTS
		Y	N	U/NR	
14A.	If the Project is served by a private well or non-public water system, have contaminants been identified in the well or system that exceed guidelines applicable to the water system?		✓		\\N/A
14B.	If the Project is served by a private well or non-public water system, has the well been designated as contaminated by any government environmental/health agency?		✓		\\N/A
15A.	Have you been informed of the past existence of hazardous substances or petroleum products with respect to the Project or any facility located on the Project?		✓		
15B.	Have you been informed of the current existence of hazardous substances or petroleum products with respect to the Project or any facility located on the Project?		✓		
16A.	Are there any environmental liens or governmental notification relating to past or current violations of environmental laws with respect to the Project or any facility located on the Project?		✓		
16B.	Have you been informed of the past existence of environmental violations with respect to the Project or any facility located on the Project?		✓		
16C.	Are you aware of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on or from the property?		✓		
16D.	Are you aware of any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on or from the property?		✓		
16E.	Are you aware of any notices from any governmental entity regarding any possible violation or environmental laws or possible liability relating to hazardous substances or petroleum products?		✓		
17.	Have there been any environmental site assessments of the Project that indicated the presence of hazardous substances or petroleum products on, or contamination of, the Project or recommended further assessment of the Project?		✓		
18.	Does the Project discharge waste water on or adjacent to the project, other than storm water, into a storm water sewer system?		✓		
19.	Does the Project discharge waste water on or adjacent to the project, other than storm water, or into a sanitary system?		✓		
20.	Have any hazardous substances or petroleum products, unidentified waste materials, tires, automotive or industrial batteries or any other waste materials been dumped above grade, buried and/or burned on the Project?		✓		
21.	Is there a transformer, capacitor or any hydraulic equipment for which there are any records indicating the presence of PCBs?		✓		
22.	Is there now or has there ever been any asbestos-containing materials (ACM), in any application, on the Project?			✓	
23.	Has there ever been any ACM testing conducted on the Project?			✓	
24.	Is there an asbestos Operations and Maintenance (O&M) program in place at the Project?			✓	

QUESTION		RESPONSE			COMMENTS
		Y	N	U/NR	
25.	Is there now or has there ever been any lead-based paint (LBP) applications on the Project?			✓	
26.	Has there ever been LBP testing conducted on the Project?			✓	
27.	Is there a Lead Paint Operations and Maintenance (O&M) Program in place at the Project?		✓		
28.	Has the water at the Project ever been tested for lead?			✓	
29.	Has Radon testing ever been conducted at the Project?			✓	
30.	Are there any other Operations and Maintenance (O&M) programs in place that we should be made aware of?		✓		
31.	Is the Project or any portion of the Project located or involved in any environmentally sensitive areas (i.e., wetlands, coastal barrier resource areas, coastal barrier improvement act areas, flood plains, endangered species, etc.)?		✓		
32.	Do you know or suspect that mold was or is present in the building(s) or HVAC system? - If "Yes", proceed to question #33. - If "No", skip question #33 and proceed to question #34.			✓	
33.	Are there reliable procedures that specify the actions (i.e. operations and maintenance) to be taken to prevent and/or respond to mold or mold producing problems?			✓	
34.	Is there a mold Operations and Maintenance (O&M) program in place at the Project?		✓		
35.	Is the HVAC system inspected at least annually?		✓		
36.	Have identified HVAC problems been corrected in a timely manner?			✓	
37.	Is there now, or has there ever been evidence of mold or mildew present at the building(s)? If so, when?			✓	
38.	Is there now, or has there ever been any water damage in the building(s), whether from flooding, plumbing, roof leaks, or other sources? If so, when?	✓			→ June '14 - water leak from a rusty pipe from the ceiling in the basement room in the main bldg.
39.	Has there ever been any sort of Indoor Air Quality (IAQ) or mold testing conducted in the building(s)?		✓		Replaced ceiling panel due to water damage
Summarize historical Project use (when was the Project developed with the current improvements, what modifications have taken place, what was the Project used for prior to it's current use)		Levine Hospital in 1951 ↓ Multi office tenant property ~ Current.

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

APPENDIX C

SANBORN® FIRE INSURANCE MAPS

Appendix C
Historical Sanborn Fire Insurance Maps Review
22330 Main Street
Hayward, California

Subject Property

Date	Comment
1888	There is no coverage of the subject property parcel except for the south corner of the property. There is a single-family residence, a shed, and half a residence (the other half is shared with an adjoining property to the south) within the parcel.
1893	There is an additional residence and granary shed on the subject property and the residence to the east is now expanded and utilized as a hay barn.
1896	No notable changes to the subject property compared to the 1893 map.
1903	The residential shed is no longer present and there is a new rectangular shed just north of the former shed.
1907	There is a buggy house and water tank present east of the hay barn.
1923	The entire subject property parcel is now visible. The hay barn is now a residence and a garage. There are now four dwellings at the south corner of the subject property and two residences to the northeast. Much of the subject property is undeveloped.
1948	The residence near the water tank is no longer present. There is now a single-family dwelling and associated garage at the northeast corner and another single-family dwelling to the northwest.
1950	The water tank and buggy house to the south are no longer visible.
1953	McKeever Court is now present within the parcel to the northwest. At the end of the court is an irregular-shaped building marked as Levine Hospital and a rectangular building utilized as medical offices.
1956	There is an additional building north of McKeever Court adjacent to the Levine Hospital that is marked as an office building. There is now a game room building behind the dwelling to the north along McKeever Avenue.
1957	The garage near the former water tank to the south of the subject property is no longer visible. The dwelling just west-southwest of the medical offices is now utilized as an office building.
1966	The office along Main Street is now vacant. The middle dwelling along Main Street is now the only dwelling present and the former buildings are now redeveloped as parking. The two dwellings at the northeast corner along Maple Court no longer have associated garages or sheds.

Appendix C
Historical Sanborn Fire Insurance Maps Review
22330 Main Street
Hayward, California

Subject Property Vicinity

Date	Comment
1888	There is no coverage for the subject property vicinity with the exception of the area to the south of the subject property. Just south of the subject property, there is a single-family residence, a livery, and half a residence (the other half being on the subject property parcel). There is a hotel (Haywards Hotel) and water tank southwest across Main Street. The properties to the southeast across A Street are mostly single-family residences and the Haywards Agricultural Works.
1893	More of the subject property vicinity to the west is now visible. The tank to the southwest is no longer present. To the west of Main Street is the Haywards Livery and Stable. The carriage buildings have changed.
1896	No notable changes to the subject property vicinity compared to the 1893 map.
1903	The Haywards Livery and Stable is no longer present.
1907	More of the subject property vicinity to the northwest and west is now visible including three single-family dwellings and a water tank.
1923	The entire subject property vicinity is now visible. San Lorenzo Creek is visible to the north as well as more single-family residences further north. There are additional single-family dwellings to the west. Many of the structures associated with the Haywards Hotel to the southwest of the subject property is now longer present. There is a lumber yard and several single-family residences directly south. There are auto repair shops across A Street to the south and to the southeast. To the east of the subject property are single-family dwellings and Maple Court.
1948	There is a service station south of the subject property at the intersection of A and Main Streets. Across Main Street there is an auto body and repair shop. There is more residential development to the west. Mc Keever Avenue has now been developed just north of the subject property. And further north are more residential properties.
1950	There are two medical offices at the corner of McKeever Avenue and Main Street just northwest of the subject property.
1953	Just north of McKeever Court (which is now present) is another medical office northwest of the subject property. There are more commercial properties at the eastern corners of the intersection of McKeever Avenue and Main Street. The auto service station just south of the subject property has been redeveloped. The property at the west corner of the intersection of Maple Court and A Street has been redeveloped into a print shop.
1956	The auto repair shop to the southeast across A Street is now a vacant lot. There are now several furniture shop buildings/warehouses to the southwest across Main Street. There is a paint retail store to the south.
1957	The map shows more commercial redevelopment to the south of the subject property. The single-family residences east of Maple Court have been redeveloped into a parking lot, while the land further east is now a strip mall.
1966	There is more commercial redevelopment to the south. There is now a tire service center south of the subject property.

APPENDIX D

HISTORICAL TOPOGRAPHIC MAPS

Appendix D
Historical Topographic Maps Review
22330 Main Street
Hayward, California

Subject Property

Date	Comments
1899	The subject property appears to be in a partially developed area. The scale of the map makes the specific site unclear.
1915	No notable changes to the subject property compared to the 1899 map.
1947	The subject property appears to be in a mostly developed area.
1948	No notable changes to the subject property compared to the 1947 map.
1950	No notable changes to the subject property compared to the 1948 map.
1959 (7.5)	No notable changes to the subject property compared to the 1950 map.
1959 (15)	No notable changes to the subject property compared to the 1959 (7.5) map.
1968	No notable changes to the subject property compared to the 1959 (15) map.
1973	No notable changes to the subject property compared to the 1968 map.
1980	No notable changes to the subject property compared to the 1973 map.
1993	No notable changes to the subject property compared to the 1980 map.

Subject Property Vicinity

Date	Comments
1899	The map shows the subject property vicinity as partially developed. San Lorenzo Creek is north of the subject property. Stevens Creek is east of the subject property. The ground slopes regionally to the southwest through the subject property vicinity.
1915	No notable change to the subject property vicinity compared to the 1899 map.
1947	The subject property vicinity is more developed, with road/grid infrastructure expanding. Hayward Union High School is visible to the northeast of the subject property.
1948	No notable change to the subject property vicinity compared to the 1947 map.
1950	The map shows more development to the far west.
1959 (7.5)	There is more development to the north, east, and south. The map shows ~80% developed land.
1959 (15)	No notable change to the subject property vicinity compared to the 1959 (7.5) map.
1968	Hayward Union High School is no longer present to the northeast. Foothill Boulevard to the east of the property is now also labeled as Highway 238. Highway 185, 92, and 9 are now also visible to the south of the subject property.
1973	No notable change to the subject properties compared to the 1968 map.
1980	No notable change to the subject properties compared to the 1973 map.
1993	The map coverage area is almost fully developed (~95%).

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2013. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

TARGET PROPERTY INFORMATION

ADDRESS

22330 MAIN STREET
HAYWARD, CA 94541

COORDINATES

Latitude (North):	37.6752000 - 37° 40' 30.72"
Longitude (West):	122.0840000 - 122° 5' 2.40"

TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/10/2014 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
CVS PHARMACY NO 0816	22501 FOOTHILL BLVD	E 0 - 1/8 (0.082 mi.)	E28	23

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/10/2014 has revealed that there are 7 RCRA-SQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 06/05/2014 has revealed that there are

State and tribal leaking storage tank lists

LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the State Water Resources Control Board Leaking Underground Storage Tank Information System.

A review of the LUST list, as provided by EDR, and dated 07/30/2014 has revealed that there are 45 LUST sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, and dated 07/30/2014 has revealed that there are 6 UST sites within approximately 0.25 miles of the target property.

DYNASTY CLEANERS	1147 B STREET	E 1/8 - 1/4 (0.180 mi.)	O95	82

HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency

A review of the HAZNET list, as provided by EDR, and dated 12/31/2012 has revealed that there are 3 HAZNET sites within approximately 0.001 miles of the target property.

US AIRS: The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

A review of the US AIRS list, as provided by EDR, and dated 10/23/2013 has revealed that there is 1 US AIRS site within approximately 0.001 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 58 EDR US Hist Auto Stat sites within approximately 0.25 miles of the target property.

EDR US Hist Cleaners: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Cleaners list, as provided by EDR, has revealed that there are 25 EDR US Hist Cleaners sites within approximately 0.25 miles of the target property.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

Environmental Interest/Information System

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: P001
Waste name: 2H-1-BENZOPYRAN-2-ONE, 4-HYDROXY-3-(3-OXO-1-PHENYLBUTYL)-, & SALTS, WHEN PRESENT AT CONCENTRATIONS GREATER THAN 0.3%

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Violation Status: No violations found

FINDS:

Registry ID: 110002883087

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Case Type: Cleanup Program Site
Case Worker: UHB
Local Agency: Not reported
RB Case Number: 01S0583
File Location: Regional Board
Potential Media Affected: Not reported
Potential Contaminants of Concern: * Chlorinated Solvents - PCE

Actual:
116 ft.

Site History: The site is contaminated by chlorinated solvents from historic dry cleaning operations (1965 to 1982). The contaminants are present in soil vapor and groundwater, and to a lesser degree, in soil. Human health risk assessment indicate that the potential incremental risk is less than what is considered acceptable by the Water Board for commercial development. As an added protective measure, the development of the theater-complex building includes a vapor barrier to mitigate the potential migration of vapors from the subsurface into the building. Tetrachloroethylene (PCE) and methyl tertiary butyl ether (MTBE) are present in groundwater at concentrations above their respective California drinking water standards; however, water for all uses at the site, including potable and landscape uses, are supplied via the municipal water supply.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Local Agency: ALAMEDA COUNTY LOP
RB Case Number: 01-0343
LOC Case Number: RO0000383
File Location: Stored electronically as an E-file
Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Gasoline
Site History: An existing service station site was purchased in 1985 by Chevron. Three backfill wells existed, and a UST leak was thereafter discovered. All USTs were replaced, but no records are available. A vapor assessment was conducted in 1987. In January 1988 wells MW-4 to MW-7 were installed; in October 1988 wells MW-8 to MW-10 were installed, in June 1989 wells MW-11 to MW-13 were installed, and in August 1990 wells MW-14 to MW-16 were installed. A groundwater extraction system was installed and started in August 1991, using ultraviolet-hydrogen peroxide reactor. Partly due to higher concentrations of arsenic (suspected to be from pesticide use at apricot orchard on and near site) the system treatment was altered in June 1992 to a bioreactor and aqueous-phase carbon. In August 1992 well MW-17 and piezometer P-1 were installed on the opposite side of San Lorenzo Creek (P-1 has history of periodic trace detections). In June 1993 soil vapor and groundwater extraction tests were conducted. In October 1996 the station was demolished, and in 1997 a dual-phase extraction system was installed. In July 1997 a RBCA analysis was submitted and benzene was found to be a risk. An August 1997 well survey found two domestic wells in the downgradient residential community. In October 1997 two-phase extraction was started, and operated through June 2002. A dual-phase extraction pilot test was conducted in December 2002. In June 2003 soil vapor probes were installed, and a second risk assessment was conducted. Fourteen CPT bores were installed in late 2004 but are unreported. Well MW-19 was installed in May 2006, as were three DVE wells. Groundwater has been monitored at the site since February 1988.

Site History: Vacant Parcels located at 581, 585, and 597 B Street at Grand Street. SCS Development will donate it to the City of Hayward Redevelopment agency and the City will donate it to Eden Housing non-profit for building senior housing apartments. Most of the soil cleanup has been done. Minor sampling should be done during building foundation trenching and grading operations.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Completed Info:

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Phase 1
 Completed Date: 03/08/2007
 Comments: Phase I investigation report submitted to DTSC with request for oversight application. This document was not prepared under DTSC oversight.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Site Characterization Report
 Completed Date: 06/20/2007
 Comments: Soil and groundwater contamination were detected at the Site. Much of the groundwater contamination appeared to be from an offsite source. This document was not prepared under DTSC oversight.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Site Characterization Report
 Completed Date: 12/27/2007
 Comments: Elevated concentrations of PCE detected in soil gas at the Site. The report recommended submittal of a "Request for Agency Oversight" application. This document was not prepared under DTSC oversight.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Site Characterization Report
 Completed Date: 03/05/2008
 Comments: A waste oil UST and other subsurface anomalies were identified at the site. This document was not prepared under DTSC oversight.

File Location: Stored electronically as an E-file
Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Gasoline
Site History: Not all historic documents for the fuel leak case may be available on GeoTracker. A more complete historic case file for this site is located on the Alameda County Environmental Health website at: <http://ehgis.acgov.org/dehpublic/dehpublic.jsp>. The subject site is co-mingled with a downgradient fuel release case currently overseen by the Hayward Fire Department. Two unregistered backyard residential wells downgradient of that site are impacted with fuel hydrocarbons. The wells are reported to be actively used by their owners. The subject site is making very limited progress, and multiple deliverables are late. Additional deliverables are due in the very near future. In December 1986 wells B1 to B3 were installed at the site due to an inventory discrepancy in November 1986. In September 1987 wells B-4 to B-6 were installed and all were renamed as monitoring wells (MW-1 to MW-6). In June 1990 three 10,000-gallon gasoline USTs and one 10,000-gallon diesel UST, and associated product lines, were removed. Due to the UST removal activities several wells were lost (or destroyed) or damaged. In October 1991 damaged well MW-1 was repaired and redesignated MW-1a, wells MW-2 and MW-4 were decommissioned, while wells MW-3, MW-5, and MW-6 had been lost or destroyed during the removal activities. In January 1992 new wells MW-1 to MW-6 were installed. In June 1993 offsite wells MW-7 to MW-10 were installed. In February 1995 hydropunch bores HP-1 to HP-17 were installed offsite to help delineate the lateral extent, and wells MW-11 to MW-14 were subsequently installed offsite later in February 1995. Vapor extraction air sparging wells VEAS-1 to VEAS-3 and extraction well EX-1 were installed in June 2002. Soil bores SB-1 to SB-6 were installed in September 2009 to help delineate the downgradient extent of soil and groundwater impacts.

Comments: No comments were provided. An Amendment to the work plan has been prepared to update schedule.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Long Term Monitoring Report
 Completed Date: 12/20/2010
 Comments: This report presents the findings of the second confirmation groundwater monitoring and sampling event conducted by AEI at the site on October 25, 2010 and October 28, 2010, as well as a response to DTSC letter dated September 21, 2010. Following DTSC's review of this report, no comments were provided.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Long Term Monitoring Report
 Completed Date: 06/08/2011
 Comments: This report documents that concentrations of TCE in well MW-4 have decreased to below laboratory detection limits for the first time. Overall groundwater concentrations in the remaining wells sampled (MW-7, MW-8, and MW-9) increased during the current event, however compared to historical site data, overall, concentrations of site contaminants in groundwater appear to be steadily decreasing at the site. The required additional sampling will confirm continued degradation of contaminants in these wells.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Long Term Monitoring Report
 Completed Date: 04/10/2012
 Comments: TCE and PCE were present in three of the four wells (MW-7 to MW-9) and c-1,2-DCE was present in two of the wells (MW-4 and MW-7). Compared to historical site data, overall concentrations of contaminants of concern in groundwater appear to be steadily decreasing at the site. In accordance with the approved monitoring schedule, semi-annual groundwater sampling of select wells (MW-4 and MW-7 through MW-9) will continue with the next sampling event currently scheduled to take place in July 2012. This will complete 2 years of post treatment monitoring; the need for future monitoring will be evaluated after the July 2012 results are received. Refer to Table 3 for a groundwater sampling schedule.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Long Term Monitoring Report
 Completed Date: 11/08/2011
 Comments: The RP completed the semi-annual confirmation sampling event in July 2011. Compared to historical site date, concentrations on the site contamintes in groundwater appear to be decreasing at the site.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Long Term Monitoring Report
 Completed Date: 11/29/2012
 Comments: The Groundwater Monitoring Report for the site summarizes the July 2012 groundwater sampling results and requests for case closure. During the July 2012 sampling event, VOCs were still detected above

Completed Date: 12/20/2010
Comments: This report presents the findings of the second confirmation groundwater monitoring and sampling event conducted by AEI at the site on October 25, 2010 and October 28, 2010, as well as a response to DTSC letter dated September 21, 2010. Following DTSC's review of this report, no comments were provided.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Long Term Monitoring Report
Completed Date: 06/08/2011
Comments: This report documents that concentrations of TCE in well MW-4 have decreased to below laboratory detection limits for the first time. Overall groundwater concentrations in the remaining wells sampled (MW-7, MW-8, and MW-9) increased during the current event, however compared to historical site data, overall, concentrations of site contaminants in groundwater appear to be steadily decreasing at the site. The required additional sampling will confirm continued degradation of contaminants in these wells.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Long Term Monitoring Report
Completed Date: 04/10/2012
Comments: TCE and PCE were present in three of the four wells (MW-7 to MW-9) and c-1,2-DCE was present in two of the wells (MW-4 and MW-7). Compared to historical site data, overall concentrations of contaminants of concern in groundwater appear to be steadily decreasing at the site. In accordance with the approved monitoring schedule, semi-annual groundwater sampling of select wells (MW-4 and MW-7 through MW-9) will continue with the next sampling event currently scheduled to take place in July 2012. This will complete 2 years of post treatment monitoring; the need for future monitoring will be evaluated after the July 2012 results are received. Refer to Table 3 for a groundwater sampling schedule.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Long Term Monitoring Report
Completed Date: 11/08/2011
Comments: The RP completed the semi-annual confirmation sampling event in July 2011. Compared to historical site date, concentrations on the site contamintes in groundwater appear to be decreasing at the site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Long Term Monitoring Report
Completed Date: 11/29/2012
Comments: The Groundwater Monitoring Report for the site summarizes the July 2012 groundwater sampling results and requests for case closure. During the July 2012 sampling event, VOCs were still detected above the site cleanup goal. Therefore, the removal actions have not reached the cleanup goals for the site and DTSC cannot close the Site.

 Potential Media Affected: Under Investigation
 Potential Contaminants of Concern: Waste Oil / Motor / Hydraulic / Lubricating
 Site History: In April 1989 complaints of inappropriate storage and discharge of hazardous wastes was received from the property manager of adjacent parcels of land. A site inspection in March 1991 and found several hazardous waste storage violations, including discharges to soil. Subsequent excavation was proposed, but is not documented to have occurred. Not all historic documents for the fuel leak case may be available on GeoTracker. A more complete historic case file for this site is located on the Alameda County Environmental Health website at: <http://ehgis.acgov.org/dehpublic/dehpublic.jsp>.

Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 12/20/2005
Comments: DTSC approved the PEA with a further action determination. Draft Final Report approved as Final with replacement cover page.

Completed Area Name: Soils
Completed Sub Area Name: Not reported
Completed Document Type: Supplemental Site Investigation Workplan
Completed Date: 11/04/2005
Comments: DTSC conditionally approved the SSI workplan with the understanding that the enclosed comments will be incorporated during field sampling activities. To ensure sampling can be completed prior to getting much further into the rainy season, the field investigation may proceed prior to finalizing the workplan; however, a final workplan that incorporates our comments should be submitted no later than 30 days after receiving this letter. Results of the SSI will be incorporated into the RAW, instead of a formal SSI report.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Workplan
Completed Date: 05/31/2006
Comments: DTSC approved the RAW as final. The RAW documents the proposed removal action activities to address the presence of lead, arsenic, chlordane, toxaphene, chlordane, dieldrin, PAHs, and PCBs in soil and chlorinated solvents in groundwater at the site. Approximately 1,500 cubic yards of soil containing PCBs, PAHs, pesticides, lead, and arsenic will be excavated from the site, transported to a State-licensed disposal facility, and the site backfilled with clean imported soil. In addition, four monitoring wells will be installed and the chlorinated groundwater plume will be monitored for one year. The plume will then be re-evaluated and decisions will be made to either treat the plume and continue monitoring, continue monitoring without treatment, or close the plume with a deed restriction.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 10/25/2013	Source: EPA
Date Data Arrived at EDR: 11/11/2013	Telephone: N/A
Date Made Active in Reports: 01/28/2014	Last EDR Contact: 09/19/2014
Number of Days to Update: 78	Next Scheduled EDR Contact: 10/20/2014
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991	Source: EPA
Date Data Arrived at EDR: 02/02/1994	Telephone: 202-564-4267

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 10/25/2013	Source: EPA
Date Data Arrived at EDR: 11/11/2013	Telephone: N/A
Date Made Active in Reports: 01/28/2014	Last EDR Contact: 09/19/2014
Number of Days to Update: 78	Next Scheduled EDR Contact: 10/20/2014
	Data Release Frequency: Quarterly

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 10/25/2013	Source: EPA
Date Data Arrived at EDR: 11/11/2013	Telephone: 703-412-9810
Date Made Active in Reports: 02/13/2014	Last EDR Contact: 08/28/2014
Number of Days to Update: 94	Next Scheduled EDR Contact: 12/08/2014
	Data Release Frequency: Quarterly

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 04/01/2014	Source: Environmental Protection Agency
Date Data Arrived at EDR: 07/08/2014	Telephone: 703-603-8704

Number of Days to Update: 45	Next Scheduled EDR Contact: 10/20/2014
	Data Release Frequency: Varies

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Date of Government Version: 10/25/2013	Source: EPA
Date Data Arrived at EDR: 11/11/2013	Telephone: 703-412-9810

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 06/10/2014

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 06/10/2014
Date Data Arrived at EDR: 07/02/2014

Last EDR Contact: 07/02/2014
Next Scheduled EDR Contact: 10/13/2014
Data Release Frequency: Quarterly

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 06/10/2014
Date Data Arrived at EDR: 07/02/2014

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal institutional controls / engineering controls registries

US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 06/23/2014	Source: Environmental Protection Agency
Date Data Arrived at EDR: 07/15/2014	Telephone: 703-603-0695
Date Made Active in Reports: 09/18/2014	Last EDR Contact: 09/08/2014
Number of Days to Update: 65	Next Scheduled EDR Contact: 12/22/2014
	Data Release Frequency: Varies

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 06/23/2014	Source: Environmental Protection Agency
Date Data Arrived at EDR: 07/15/2014	Telephone: 703-603-0695

	Data Release Frequency: Varies

Federal ERNS list

ERNS: Emergency Response Notification System

Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances.

Date of Government Version: 09/30/2013	Source: National Response Center, United States Coast Guard
Date Data Arrived at EDR: 10/01/2013	Telephone: 202-267-2180
Date Made Active in Reports: 12/06/2013	Last EDR Contact: 07/03/2014
Number of Days to Update: 66	Next Scheduled EDR Contact: 07/14/2014
	Data Release Frequency: Annually

State- and tribal - equivalent NPL

RESPONSE: State Response Sites

Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

Date of Government Version: 06/05/2014	Source: Department of Toxic Substances Control
Date Data Arrived at EDR: 06/06/2014	Telephone: 916-323-3400
Date Made Active in Reports: 07/09/2014	Last EDR Contact: 08/06/2014
Number of Days to Update: 33	Next Scheduled EDR Contact: 11/17/2014
	Data Release Frequency: Quarterly

State- and tribal - equivalent CERCLIS

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Date of Government Version: 06/05/2014	Source: Department of Toxic Substances Control
Date Data Arrived at EDR: 06/06/2014	Telephone: 916-323-3400
Date Made Active in Reports: 07/09/2014	Last EDR Contact: 08/06/2014

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Local Lists of Hazardous waste / Contaminated Sites

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 05/28/2014	Source: Drug Enforcement Administration
Date Data Arrived at EDR: 06/20/2014	Telephone: 202-307-1000

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Last EDR Contact: 09/10/2014
Next Scheduled EDR Contact: 12/22/2014
Data Release Frequency: Quarterly

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995	Source: EPA
Date Data Arrived at EDR: 07/03/1995	Telephone: 202-564-4104
Date Made Active in Reports: 08/07/1995	Last EDR Contact: 06/02/2008
Number of Days to Update: 35	Next Scheduled EDR Contact: 09/01/2008
	Data Release Frequency: No Update Planned

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

Date of Government Version: 04/01/2014	Source: Environmental Protection Agency

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR US Hist Cleaners: EDR Exclusive Historic Dry Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities

Source: Department of Social Services

Telephone: 916-657-4041

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

UTM Y (Meters):	4169968.5
Elevation:	127 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	37122-F1 HAYWARD, CA
Most Recent Revision:	1980

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

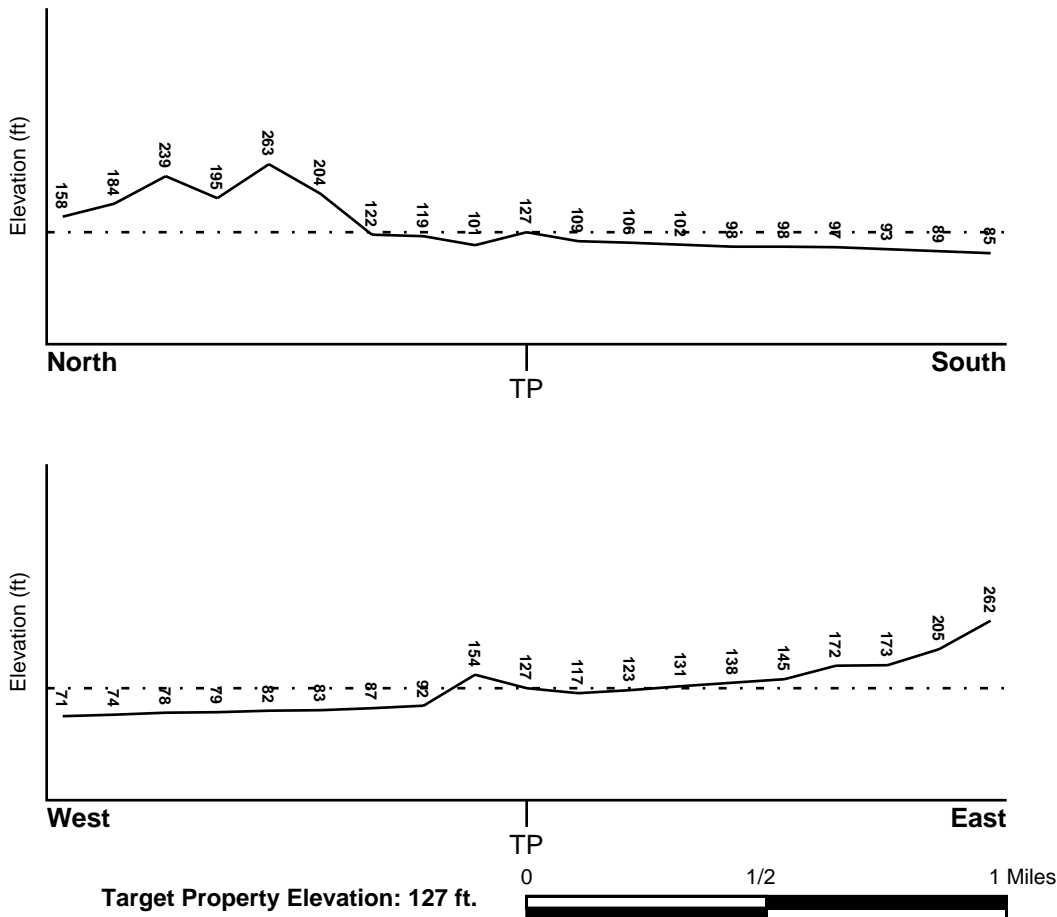

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Target Property County</u> ALAMEDA, CA	FEMA Flood <u>Electronic Data</u> YES - refer to the Overview Map and Detail Map
Flood Plain Panel at Target Property:	06001C - FEMA DFIRM Flood data

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u> HAYWARD	NWI Electronic <u>Data Coverage</u> YES - refer to the Overview Map and Detail Map
-----------------------------------------------	------------------------------------------------------------------------------------------

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data:*

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Los Osos

Soil Surface Texture: silty clay loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database

Source: Department of Water Resources

Telephone: 916-651-9648

California Drinking Water Quality Database

Source: Department of Public Health

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations

Source: Department of Conservation

Telephone: 916-323-1779

Oil and Gas well locations in the state.

RADON

State Database: CA Radon

Source: Department of Health Services

Telephone: 916-324-2208

Radon Database for California

Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

APPENDIX G

RESUMES OF ENVIRONMENTAL PROFESSIONALS

CHRISTOPHER J. BALDASSARI

Senior Geologist

Mr. Baldassari is a geologist with 12 years of experience in the environmental industry. During this time, Mr. Baldassari has served as a project manager and technical consultant for numerous site characterization investigations, remedial action projects, and site assessments. His experiences include: (1) conducting Phase I and Phase II site assessments and investigations; (2) planning, implementing and managing sampling and analysis programs; (3) designing, evaluating, and implementing remedial alternatives; and (4) remedial action planning and reporting. He has had extensive field experience including utilization of cone penetrometer testing (CPT), membrane-interface probes (MIP), air rotary and hollow stem auger drilling, and various direct push and HydroPunch™ drilling, sampling, and injection methods including in-situ chemical oxidation (ISCO) and hydrogen-enrichment materials. He also has extensive field experience in well installation and development, soil excavation, and soil, water, and soil vapor sampling.

EDUCATION

M.S. Applied Geosciences, Hydrogeology, San Francisco State University, California, 2006

Postgraduate Studies, Physical Geography, San Francisco State University, California, 1997-1998

Continuing education courses:

National Ground Water Association, Advanced Techniques for Evaluation and Quantifying Natural Attenuation

Zweig White & Associates, Turning Technical People into Project Managers

HEALTH AND SAFETY TRAINING

Health and Safety training courses following EPA and OSHA requirements (40-hour)
8-hour Supervisory

EXPERIENCE

Jun. 2006 – Present: PES Environmental, Inc., Novato, California

Jun. 2004 – Dec 2005: Pacific Geoscience, San Anselmo, California

Nov. 2000 – June 2004: City of San Rafael, Associate Planner, San Rafael, California

Mar. 2000 – Nov. 2000: City of San Leandro, Senior Engineering Aide, San Leandro, California

Jun. 1997 – Mar. 2000: U.S. Environmental Protection Agency, Environmental Protection Specialist, California

Christopher J. Baldassari

Page 2 of 3

REPRESENTATIVE PROJECTS

Dry-Cleaning Facility, Milpitas, California – Project geologist and reporting co-author responsible for conducting site investigation, well installation, hydrologic study, in-situ chemical oxidation and soil vapor extraction pilot study activities and quarterly monitoring reports. Additionally, to evaluate the extent of the groundwater plume, Membrane Interface Probe (MIP) and Cone Penetrometer Testing (CPT) investigations were completed on-Site and in downgradient City streets. Mr. Baldassari also implemented an in-situ pilot testing program utilizing sodium persulfate. Former facility has subsequently been redeveloped during RWQCB-directed investigation and remediation activities. Client: Confidential Investment Trust

Petroleum Hydrocarbon Site Investigation and Remediation Program, Salt Lake City, Utah - Project manager for conducting an investigation and remediation of hydrocarbon contamination from former USTs. Project tasks included soil and groundwater investigations, health risk assessment, soil excavation plan design, and implementation. Remediation included excavation of approximately 1,000 cubic yards of soil. Regulatory NFA letter is anticipated. Client: SkanlanKemperBard

Dry Cleaning Facilities, Hayward and Berkeley, California – Field geologist participating in the investigation and reporting of groundwater and soil contaminated by chlorinated compounds. Groundwater/soil samples collected to characterize lithology and extent of contamination at the site. Implemented in-situ pilot testing of hydrogen-enriched materials. Clients: Confidential

Former Solvent Recycling Facility, Emeryville, California – Project geologist and report co-author for investigation of subsurface conditions at former solvent recycling facility undergoing DTSC-directed corrective action. Client: Confidential

Geochemical Evaluation of Municipal Drinking Water Supply, Sebastopol, California – Field oversight of hydrogeologic and geochemical sampling investigations of the presence of naturally occurring arsenic and low-level VOC contamination in groundwater extracted from deep wells screened within the Wilson Grove Formation in the highlands area west of the Santa Rosa Plain. Prepared MS Access database and performed data evaluation for AB610 Water Supply Assessment for proposed development area. Client: City of Sebastopol

Landfill Assessment, Newark, California – Field geologist and report co-author responsible for investigation, assessment, and reporting activities related to groundwater impacts at an inactive landfill with regard to generation and migration of leachate and methane, and on future development. Client: Sobrato

Soils Assessment, Richmond, California – Field geologist and report co-author responsible for investigation, assessment, and reporting activities characterizing pre-construction soil conditions at a site with PCBs in soils. Client: Richmond Community Redevelopment Agency

Christopher J. Baldassari

Page 3 of 3

Underground Storage Tank, City of Santa Rosa, California – Under RWQCB CAO oversight, investigated and assessed the extent of soil and groundwater contamination associated with a former gasoline UST. Installed a well network to monitor conditions at the site, which indicated that groundwater was contaminated from multiple PRPs. Client: City of Santa Rosa

Site Investigations – California, Colorado, and Utah: Conducted Phase I ESAs and Phase II Subsurface Investigations at over 30 commercial properties. These properties included retail/commercial shopping centers, high-rise office buildings, agricultural, and multi-family residential sites. Tasks completed include historical property and surrounding site use research, site and offsite inspections, review of other consultants' reports, regulatory agency file reviews, assessment of hazardous materials/hazardous waste handling practices, interviews, soil, soil gas, and groundwater sampling, and reporting. Environmental issues discovered at some of these sites included onsite chlorinated solvent contamination from dry-cleaning facilities or other industrial processes, petroleum hydrocarbon contamination from fueling facilities, residual pesticides in soil, and groundwater contamination resulting from offsite sources. Clients: Confidential Real Estate Investment Trusts and Developers

Lead, Zinc, VOC, and Petroleum Hydrocarbon Contamination in Soil, Oakland, California – Field geologist and task manager for site investigation and remediation activities to remove soil affected with lead, zinc, petroleum hydrocarbons, and VOCs at an active metal-working facility. Client: Confidential

Wood Mill Investigation, Sacramento, California – Field geologist and report co-author for groundwater and soil investigation at an active wood mill as part of pre-acquisition and due-diligence activities. Investigations included geophysical surveys using electromagnetic and ground penetrating radar. The investigation indicated that petroleum hydrocarbon- and VOC-affected soil and groundwater was present at the site, as well as an undocumented landfill. Up to seven distinct groundwater plumes were identified on the 30-acre property. Client: Signature Properties

Evaluation, Management, and Corrective Action Program, Municipal Landfill, Petaluma, California – Field geologist participating in the characterization of lateral and vertical extents of landfill leachate migration within alluvial and sedimentary rock aquifers. Tasks performed included: (1) collected and evaluated hydrogeologic test data from Site well network, (2) prepared lithologic logs of borings and cross-sections; (3) provided field oversight and management of soil and groundwater sampling; and (4) conducted quarterly surface water and groundwater reporting. Client: Sonoma County Department of Public Works

KYLE S. FLORY, P.G.

Principal Geologist

Mr. Flory has more than 27 years professional experience managing and performing technical studies in the fields of geology, hydrogeology, and environmental engineering. Mr. Flory has extensive experience in all phases of investigation, remediation, management, and closure of hazardous waste sites. Mr. Flory has conducted environmental work on aero-space manufacturing facilities, operating airports, nursery facilities, former shipyard manufacturing facilities, former solvent recycling facilities, pulp mills, wood mill sites, hazardous waste landfills, hazardous waste incinerator facilities, decommissioned oil refineries, oil drilling sites, dry-cleaning facilities, pesticide and chemical manufacturing plants, government research and development laboratories, freeze-drying facilities, wood treatment facilities, and leaking underground fuel storage tank sites.

Mr. Flory has evaluated field data to determine geologic and hydrogeologic characteristics of the vadose and saturated zones, defined the extent of contamination in the subsurface, determined contaminant volumes in the subsurface, conducted feasibility studies for remedial alternatives, performed cost-analysis to determine cost-effective remedial options in conjunction with redevelopment plans, assessment and evaluation of monitored natural attenuation parameters, developed health risk-based closure plans, designed and supervised the installation of remediation systems, supervised ongoing remediation activities, and monitored remediation progress through the life of each project. Through the application of his expertise in these areas, Mr. Flory has supported the investigation, remediation and closure of many sites across the country that have been impacted with a wide variety of contaminants. Mr. Flory has also provided technical support in litigation cases.

Mr. Flory is experienced in a wide variety of drilling techniques, direct-push sampling technologies, soil and sediment sampling, groundwater monitoring and extraction well design and installation, groundwater sampling, evaluating soil and groundwater analytical results, aquifer testing and analysis, soil vapor extraction well installation, vapor extraction testing and analysis, groundwater sparge testing and analysis. Mr. Flory has also performed vapor intrusion analysis, conducted indoor air sampling, health risk assessments, developing risk-based target soil and groundwater cleanup levels, regulatory negotiations, litigation support, establishing terms of sale contracts, developing the amount of escrow hold-back accounts, client relations, and project management.

EDUCATION

B.S., Geology, 1984, University of Missouri-Columbia

EXPERIENCE

1996 - Present:	PES Environmental, Inc., Novato, California
1990 - 1996:	Philip Environmental, Emeryville, California
1990 - 1990:	EMCON Associates, San Jose, California
1985 - 1988:	Woodward-Clyde Consultants, St. Louis, Missouri
1985 - 1985:	Exploration Logging Co., Houston, Texas

REGISTRATION

Professional Geologist - California

REPRESENTATIVE PROJECTS

Dry-Cleaning Facilities in California, Delaware, Illinois, Maryland, North Carolina, New Jersey, New Mexico, Oregon, Pennsylvania, South Carolina, Virginia, Washington, Washington D.C., and Wisconsin – Managed and supervised numerous subsurface investigations at approximately 75 dry-cleaning facilities. Initial investigations were conducted on behalf of potential buyer of shopping centers as part of due diligence. Investigations established baseline conditions at the time of the property transfer and allowed buyer to receive indemnity from seller or fund remediation and monitoring through escrow hold-back accounts. Also assisted other environmental consultants develop and implement subsurface investigations and remedial strategies. Developed and implemented remedial plans for cleanup of numerous dry-cleaning facilities. Clients: Confidential Real Estate Investment Trusts and Property Owners

San Francisco International Airport – Provided technical consulting, litigation support and conducted technical settlement negotiations on behalf of the City and County of San Francisco regarding contaminated soil and groundwater encountered during development of the San Francisco International Airport and future costs associated with handling and managing contaminated soil and groundwater. The process included conducting detailed analysis of historical and current operations at SFIA (i.e., number of tenants at a particular location, types of operations, length of operations, leases with SFIA and agreements with other tenants, types and nature of contaminants encountered, groundwater flow direction, underground utility corridors, etc.). Based on the review of the available information, past costs incurred and future costs expected to be incurred by SFIA were allocated to current and former tenants in accordance with the unique set of circumstances associated with each discrete development project. The results of the findings were presented to current and former tenants as technical basis for damage claim. Clients: Morrison & Foerster LLP and City and County of San Francisco

Former Shipyard Operations Facilities, California – Conducted supplemental subsurface investigations to evaluate extent and volume of chemically-affected soil. Developed cleanup strategy and approach for cleanup of lead- and petroleum hydrocarbon-affected soil. Managed remediation of site through case closure. Remediation included excavation and relocation of 5,000 cubic yards of lead-affected soil beneath public roadway, excavation and bioremediation of 7,400 cubic yards of petroleum hydrocarbon-affected soil and groundwater monitoring. Case was closed by DTSC and the property was redeveloped. Clients: Confidential Developer and City of Richmond Redevelopment Agency

Kyle S. Flory

Page 3 of 7

Former Solvent Recycling Facility, California – Managed and supervised Remedial Investigation, Interim Remedial Action and Remedial Action Plan development and implementation under RWQCB Cleanup Order at former solvent recycling facility in San Jose, California. RI work scope included soil gas sampling, soil sampling, groundwater monitoring well installations and sampling, monitored natural attenuation parameter evaluation and reporting. IRA work scope included on and off site groundwater monitoring well installations and sampling, geophysical survey, underground utilities survey, UST removals, monitored natural attenuation parameter evaluation and reporting. Developed and prepared an NCP-compliant Remedial Action Plan including health risk assessment, vadose zone fate and transport modeling, groundwater fate and transport modeling, evaluation of natural attenuation data, development of target soil and groundwater cleanup goals, feasibility study, and development of proposed remedy. Remedial Action Plan was accepted by the community and the RWQCB. Implemented the remedy which included source removal and monitored natural attenuation with periodic injection of hydrogen enrichment material at downgradient locations. Client: Confidential

Nursery Facilities, California – Conducted historical review and supplemental subsurface investigations to investigate pesticide-, lead-, and petroleum hydrocarbon-affected soil and groundwater. Investigation included multi-depth discrete groundwater sampling, geophysical surveys for former fuel sources of boilers, soil sampling within greenhouses and exterior areas, and groundwater monitoring well installation and sampling. The investigation indicated that VOC-affected groundwater had affected multiple water-bearing zones beneath the site and the VOCs had originated at an off-site location(s). Developed cleanup strategy and approach for cleanup of pesticide-, lead-, and petroleum hydrocarbon-affected soil and groundwater. Prepared NCP-compliant Remedial Action Plan and participated in extensive community outreach program as part of remedial planning process. Remediation plan includes excavation and off-site disposal of pesticide-, lead-, and petroleum hydrocarbon-affected soil and groundwater monitoring. Clients: Eden Housing, Inc. and Community Housing Development Corporation of North Richmond

Pulp Mill, California – Developed Areas of Interest on large pulp mill in Humboldt County. Pulp mill is located in sensitive environment with Humboldt Bay immediately east and the Pacific Ocean to the immediate west. Investigations included cone-penetrometer testing, soil gas sampling and analysis, soil and groundwater sampling, and installation, development and sampling of multi-depth groundwater monitoring wells. Analysis of geochemical parameters was conducted to establish boundaries of freshwater-seawater intrusion and levels of background metals dissolved in groundwater. Pulp mill was sold and additional actions are pending. Client: Evergreen Pulp, Inc.

Wood Mill, California – Conducted historical research for property developer as part of environmental due diligence. Results of Phase I ESA resulted in subsurface investigations designed to investigate soil and groundwater conditions related to current or historical operations. Investigations included soil and groundwater sampling, geophysical surveys using

Kyle S. Flory

Page 4 of 7

electromagnetic and ground penetrating radar and asbestos/lead-based paint sampling. The investigation indicated that petroleum hydrocarbon- and VOC-affected soil and groundwater is present at the site. Up to seven distinct groundwater plumes were identified on the 30-acre property. Project is on hold pending recovery of real estate market. Client: Signature Properties

Former Food Drying Facility, California – Managed and supervised Remedial Action Plan development and implementation under RWQCB SLIC Program, and provided litigation support for cost recovery at former food drying facility in Palo Alto, California. Remedial Action Plan was developed based on RI work conducted by others. Developed and prepared an NCP-compliant Remedial Action Plan including health risk assessment, vadose zone fate and transport modeling, development of target soil cleanup goals for TCE, feasibility study, and development of proposed remedy. Remedial Action Plan was accepted by the community and the RWQCB. Implemented the remedy which included source removal from interior locations through slot trenching down to 20 feet below grade. RWQCB granted no further action status for the case on the basis of the remediation results. Client: Confidential

Remediation of Dry-Cleaning Facilities in California – Developed and implemented remedial plans for cleanup of numerous dry-cleaning facilities. Developed risk-based target soil cleanup levels and negotiated acceptance of target levels with regulatory agencies. Soil remediation was conducted via selective soil removal or soil vapor extraction. Soil excavation consisted of removal of 25 to 60 in-place cubic yards of soil and confirmation sampling. Vapor extraction was conducted using one vapor extraction well to ten soil vapor extraction wells depending on site conditions. Case closure was achieved at all dry cleaning facilities following confirmation soil sampling or on the basis of vapor extraction system performance. Clients: Confidential Real Estate Investment Trusts and Property Owners

Hazardous Liquid Waste Incinerator, Michigan - Performed as onsite geologist and onsite manager for a \$2.5 million field investigation and subsequent RI/FS at a liquid waste incineration plant site in Michigan. The site was number one on the Environmental Protection Agency (EPA) National Priority List. The field work consisted of drilling and sampling 175 soil borings, 40 of which were completed as groundwater monitoring wells; well development, soil gas survey, residential well sampling, geophysics, supervision of eight field personnel, coordination of drilling and sampling operations, preparation of reports and posters for presentations, and representing the company to the EPA, MDNR, and PRP's on a daily basis. Mr. Flory was onsite for 1.5 years. Client: Berlin & Farro Trust Fund

Aerospace Manufacturing Plant Closure Program, California - Managed and supervised regulatory mandated investigation and remediation at an aerospace manufacturing facility in Southern California with light and dense nonaqueous phase liquid contamination. Activities included preparing work plans for all phases of field work, performing an extensive soil gas survey, installing and monitoring multi-level semi-permanent soil gas probes, supervising quarterly groundwater monitoring events, designing and installing a dual-completion vapor

Kyle S. Flory

Page 5 of 7

extraction wells, designing and installing a vapor extraction system for chlorinated hydrocarbons, managing remediation of vadose zone; supervising sump, clarifier, and underground fuel storage tank removals; managing hazardous and non-hazardous waste disposal, managing subcontractors, reducing data, preparing investigation and closure reports, agency negotiation and project management. Client: Confidential

Oil Field Closure, Redondo Beach, California - Managed and supervised a decommissioned oil drilling site, a pipeline run, and a crude oil processing tank farm in Southern California. Field activities consisted of conducting subsurface investigations to determine extent of hydrocarbon impacted soil and groundwater plumes, drilling in Level B protection to define formaldehyde impact to soil, supervising soil excavation activities, performing confirmation soil sampling, reducing data, preparing investigative reports, and regulatory negotiation and project management. Client: Triton Oil & Gas Corp.

Closure of Hydrocarbon Contaminated Wetlands, California - Managed and supervised a remedial investigation to determine type and extent of hydrocarbon contamination to approximately 43,000 cubic yards of fill. Fill was dumped on a wetland area under Army Corps. of Engineers jurisdiction in Northern California. Through extensive sampling and gas chromatography analysis, asphalt was determined to be the source of the hydrocarbons in the fill. Case was closed by the regulatory oversight agency. Client: City of Fairfield

RCRA Permitting Investigation, California - Performed RCRA permitting investigation for expanding Class I landfill in California. Supervised drilling and sampling of approximately 50 soil boreholes, monitoring wells, and vibrating wire piezometers. Also supervised downhole geophysics including spontaneous potential log, e-log, resistivity, gamma-gamma, caliper log and video log. Also assisted in data reduction for investigation report. Client: Casmalia Landfill

Closure of Medical Research & Development Laboratories, California - Managed and supervised a multi-phase decommissioning and closure of medical R&D laboratories. Closure included permitted hazardous waste management areas, conditionally-authorized acid waste neutralization system, drum crusher, 1,000-gallon diesel fuel UST, three vapor scrubber systems, underground fire containment tank, process, house and portable vacuum systems, burn box lines, x-ray room, chiller water sumps, and sandblaster system. Decommissioning and assessment resulted in leaving approximately 5,000 feet of ductwork in-place. Following successful decommissioning and closure the building was demolished. Client: Varian Medical Systems, Inc.

Closure of USGS Research & Development Laboratories, California - Managed and supervised a multi-phase investigation and subsequent remediation of 200,000 square feet of R&D laboratories. Conducted extensive negotiations with U.S. Federal government. Federal government agreed to compensate client for majority of investigation and all remediation costs. Achieved closure of the facilities through health risk-based closure plan. Worked closely with

Kyle S. Flory
Page 6 of 7

new tenant's environmental consultant in establishing cleanup goals consistent with clients and new tenants goals. Client: WSJ Properties

RI Investigation at Former Aerospace Manufacturing Facility, California – Designed and managed subsurface investigation at former General Dynamics facility. Investigation was conducted following comprehensive Phase I ESA. Subsurface investigation included assessment of soil gas, soil and groundwater. On the basis of the results of the work, several parcels of property were eliminated as suitable for redevelopment and several other parcels were identified as appropriate for redevelopment. Client: Frito-Lay, Inc.

RI Investigation at Former TNT Manufacturing Facility, California – Designed and managed subsurface investigation at former TNT, DNT and DNB manufacturing facility. Investigation was conducted following exhaustive Phase I ESA. Subsurface investigation included assessment of fill material, native soil and underlying groundwater. Work was conducted to evaluate suitability for residential development. Client: Confidential Developer

Multiple Subsurface Investigations, Various States - Developed relationship with a nationwide transportation firm to provide environmental consulting to facilities located across the United States. Activities include multi-phase subsurface investigations to define hydrocarbon impact to soil and groundwater, soil gas surveys to determine volatile organic compound impact to shallow soils, and investigation of soil impacted with virgin motor oil. Client: Penske Truck Leasing Company

Pesticide Investigation, Missouri - Conducted an onsite and offsite subsurface investigation of a pesticide manufacturing plant in Missouri. Field work consisted of drilling and installing groundwater monitoring wells and subsequent monitoring of groundwater quality. Client: Ortho-Chevron

Wood Treatment Plant Remedial Investigations, Illinois and Ohio - Supervised remedial investigations at wood treatment plants in Illinois and Ohio. Supervised drilling and installation of numerous groundwater monitoring wells, and evaluation of onsite extraction of naphthalene to assess potential for onsite product recovery. Client: Confidential

Underground Fuel Storage Tank Removals, Various States - Supervised field activities and prepared closure reports for over 20 underground fuel storage tank removals for national telecommunications firm as part of due diligence for property transfers. The sites were located in various states and cities across New England and the eastern United States. Client: MCI Communications

RI/FS Investigation, Nebraska - Supervised drilling and sampling of numerous groundwater monitoring wells at federal munitions plant in Nebraska during USEPA mandated RI/FS. Groundwater monitoring wells in excess of 180 feet deep were drilled using mud rotary

Kyle S. Flory
Page 7 of 7

drilling techniques. Also conducted extensive groundwater testing at the Superfund site.
Client: Confidential

Remediation Pilot Tests, California - Conducted soil vapor extraction and groundwater sparging pilot tests. Developed testing protocol used in tests, supervised field testing, reduced data generated during pilot testing, and prepared reports presenting results of pilot testing.
Clients: Kilpatrick's Bakery, Penske Truck Leasing Company

SAFETY TRAINING

Health and Safety training courses following EPA and OSHA requirements. Courses included training in physical, chemical, and toxicological properties of hazardous materials; hazard evaluation and control; selection and use of personal protective equipment; sampling and monitoring techniques and equipment; site entrance and decontamination procedures; and safety plan development. Mr. Flory has also completed Supervisor Training and 8-hour Level B Training.
