Description: This project involves retrofitting the used oil underground storage tank (UST) system with a positive shut-off device to comply with regulatory requirements for overfill prevention. The selected solution, based on the OPW 61/STOP valve, will automatically halt product delivery when a preset tank capacity is reached, ensuring that overfill does not occur during pump-on fills. The project scope includes:							
Procurement of the OPW 61/STOP overfill prevention valve. Installation and integration of the valve with the existing fill system. Verification and testing to ensure proper shut-off operation. Coordination with the Hayward Fire Department for permitting and compliance documentation. This installation will provide a reliable, automatic safeguard against overfilling, thereby mitigating potential spill risks and ensuring continued operational safety.
